

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REPORT

TO

The Right Honourable SIR CHARLES DILKE, Bart., M.P.,
President of the Local Government Board, &c. &c.

*General Register Office, Somerset House,
31st March, 1883.*

(1881.)

SIR,

I HAVE the honour to submit to you the detailed abstracts of the marriages, births, and deaths that were registered in England and Wales during the year 1881, and, in accordance with previous custom, to make the following report on the more important features in the vital statistics of that year.

Increase of Population.—The numbers of births and deaths registered in the year were 883,642 and 491,935 respectively, so that the natural increment of the population, or excess of births over deaths, was 391,707; an increment far higher, both proportionally and absolutely, than was recorded in any of the three preceding years, and amounting to 1·52 per cent. on the population of the immediately preceding year 1880. This rise in the natural increment was due, as will be hereafter seen, not to the introduction of an exceptional number of new comers into the population,—on the contrary, the birth-rate was the lowest on record for 22 years,—but to a great diminution in the deaths, only one person out of 53 having died during the year, whereas the best record in any previous year had been one death out of 49 persons living.

The actual growth of the population is, however, determined not entirely by its natural increase, but to some extent by the balance between emigration and immigration; a balance which cannot be struck with more than roughly approximative accuracy. It would appear, however, from the returns made by the Board of Trade that the loss from excess of emigration in 1881 must have been much above the average. For, while the emigrants of English or Welsh birth who left the United Kingdom were 64·5 per cent. above the average of the five preceding years, the recorded immigrants of all nationalities were only 2·63 per cent. above the average for the same period.

The population, as enumerated in April 1881, numbered 25,968,286* persons; and, on the hypothesis that the rate of increase continued to be the

* This is the unrevised number, as published in the Preliminary Census Report, which has been used throughout this Report. The revised number for publication in the final Report is 25,974,437.

same as it had been in the interval between that and the previous census, the number of inhabitants of England and Wales in the middle of 1881 was 26,055,406. Of these, 12,676,276 were males and 13,379,130 were females. This is the population on which the rates in this Report have been calculated.

MARRIAGES.

The marriages in 1881 numbered 197,290, giving a rate of 15·1 persons married to 1000 persons living. With the single exception of 1853, the marriage-rate was at its maximum in 1873, in which year it reached 17·6. From that date it fell continuously, year by year, to 1879, when it was at its minimum, and as low as 14·4. In 1880 it began to recover from this long depression, and was 14·9; and in 1881 a still further slight improvement occurred, and the rate, as already stated, rose to 15·1.

Among foreign European states, Austria, Belgium, Denmark, and Italy, showed a similar recovery, while the rate still remained depressed in the German Empire, in Switzerland, in Sweden, and in Holland (see Table 74).

In my last Annual Report it was pointed out that the marriage-rate reflects with much accuracy the condition of public welfare, and that its fluctuations coincide, in direction though not in degree, with the fluctuations in such measures of commercial activity, as the total value of imported and exported merchandise. It was also pointed out that the fluctuations in the marriage-rate coincide more closely with those of exports of British goods than with those of imports. The year 1881 has given additional confirmation to that statement; for in that year, coincidently with the rise in the marriage-rate, there was a rise in the value of exports, but a fall in the value of imports. It will be seen in Table A. that twice only in the 22 years, the changes in which are shown, did the marriage-rate and the exports move in different directions, whereas the marriage-rate and the imports moved diversely on seven occasions in the same period.

Increased commercial and industrial activity implies higher wages or an increase in the number of persons receiving wages, and this, of course, it is that determines the coincident rise in the marriage-rate. It might naturally be anticipated that the same result that is produced by high wages would also be produced by what would seem to be practically much the same thing, namely, cheap food; and in fact it is often stated that such is the case, and that marriages increase in number as the price of food goes down. But, strange as it may seem, the very opposite appears to be the case, at any rate of late years in this country, and with the price of wheat taken as a standard. The price of wheat and the marriage-rate have varied during the last ten years together, and not inversely, as is clearly shown in Table A. It will there be seen that from 1870 to 1873, wheat was getting dearer and dearer, and that simultaneously the marriage-rate was getting higher and higher. From 1873 to 1879, the marriage-rate fell continuously, and with it fell also, though not in quite such unbroken continuity, the price of wheat. In 1880 a change occurred, the marriage-rate rose, and continued to rise in 1881, and so also did the price of wheat.

The parallelism of these fluctuations, taking them as a whole, is too close to be attributable to mere accident. It is not easy, however, to suggest any adequate explanation of the fact. Can it be that the same cause which leads to increased marriages, namely, high wages or more employment, leads also to a greater consumption of bread, and that the price of wheat goes up, with this increased demand? If so, we should expect that a high marriage-rate would correspond with high prices of other articles of consumption; and as a matter of fact it will be seen in

Table 46, that the year in which the marriage-rate reached its maximum, namely 1873, was also the year in which the mean prices of beef, of mutton, of potatoes, and of sea-borne coal, in the London Market, were at their maxima.

TABLE A.—MARRIAGE-RATE, BRITISH EXPORTS, and IMPORTS, and PRICE of WHEAT, in each of the 22 Years 1860-81.

1881	15.1	6 14 0	11 7 4	19 17 5	45 4

NOTE.—The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures in the value columns are derived from the Board of Trade Statistical Abstracts, but have been slightly altered in accordance with later and more accurate estimates of the population.

It was pointed out in my last Annual Report, that just as the greatest depression in the marriage-rate had occurred, speaking generally, in the mining districts, then in the manufacturing districts, and last of all in the agricultural parts, so also had the recovery followed, on the whole, the same order; that is to say, that those counties, which had been most depressed, were also those that had recovered most. It will be seen in Table B. that though the further recovery in 1881 followed, in some degree, the same course, yet that in that year the agricultural counties showed signs of sharing, to a much larger extent, in the general recovery; for, among counties in which the rate of increase was far above the average of the whole country, will be seen Bedfordshire, Cambridgeshire, Buckinghamshire, Oxfordshire, and Worcestershire,

TABLE B.—DECREASE per Cent. of the MARRIAGE-RATE in 1879 in Counties from the AVERAGE RATE of 1872-73, and the INCREASE or DECREASE in 1880 and 1881, as compared with the ratio in the preceding year.

* The years 1872-3 are taken as the basis of comparison, because these are the years in which the marriage-rate was at its maximum.

The marriages are by no means equally spread over the year. In England and Wales as a whole, and also in the individual counties without exception, there are fewer marriages in the first quarter than in any other. The maximum quarter, both in the entire country and, with three

exceptions, in each county, is the fourth; while between the second and third there is but little difference, the second, however, having in the long run the preference. The three counties which are exceptions to the otherwise universal rule of the maximum falling in the Christmas quarter are Herefordshire, Shropshire, and, in a notable degree, Lincolnshire*; in each of which, on an average of 7 years (1875-81), the maximum fell in the second and not in the fourth quarter. Disregarding such exceptions, for which local explanations are probably to be found, the predominance of the fourth quarter, is, as a rule, much more marked in purely agricultural counties than elsewhere; presumably because in agricultural districts the fourth quarter is a period of comparative leisure, whereas in industrial or, speaking generally, in urban districts there is much less distinction between one season of the year and another as regards occupation. Compare, for example, Lancashire or London with the following five corn-growing counties, Cambridgeshire, Essex, Norfolk, Suffolk, and Huntingdonshire.

TABLE C.—MARRIAGES in each QUARTER per 1000. 1872-1881.

—	1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.
All England and Wales -	207	251	245	297
London - - -	198	250	267	285
Lancashire - - -	224	252	256	267
Mean of 5 corn-growing counties	182	216	220	332

In this country the marriages are only abstracted by quarters; but, in order to afford means of comparison with those foreign countries in which the marriages are abstracted by months, they have been this year taken out in greater detail for a single county, viz., Gloucestershire, and for a single large town, viz., Manchester. The first two columns in the following Table give the results; the months having been reduced to an equality as regards number of days. Other columns are added, giving the figures for some other countries.

TABLE D.—MARRIAGES in each MONTH per 1000 in year.

Month.	Gloucester-shire, 1881.	Man- chester, 1881.	Scot- land, 1861-70.	German Empire, 1872-80.	Den- mark, 1875-79.	Nor- way, 1876-78.	Switzer- land, 1876-78.	France, 1876-79.	Italy, 1876-78.

December -	126	115	173	62	101	97	63	51	94

* It was noticed so long ago as in the 27th Annual Report (1854) that "Lincolnshire is the only county in which the spring weddings exceed the autumn weddings in number." Possibly the custom in that county of hiring labourers from April 6th to April 6th in the succeeding year may have to do with this.

The county of Gloucestershire, comprising, as it does, the bulk of the great town of Bristol as well as a large agricultural population, may be taken as fairly representing the total of England and Wales, and it was selected because, as a matter of fact, the distribution of its marriages by quarters was found to correspond very closely with the distribution in the country at large. It will be noticed, that the months in which most marriages occurred were December, October, April, and June. The excesses in December, April, and June were due to the festival periods of Christmas, Easter, and Whitsuntide, respectively; while the excess in October marks the period of leisure, and of cash in the labourer's pocket, which follows the close of harvest-time. This excess in October would doubtless have been still more marked, had a purely agricultural country been selected; for in the completely urban population of Manchester, no such excess in October is noticeable, whereas the festival months of Christmas and Whitsuntide show high figures. In the town the Whitsuntide marriages, in June, were much more numerous than the Easter marriages, in April; whereas in the county, the reverse was the case, a difference which may be attributed to the fact that the agricultural population was busy in June with the hay. In both town and county the marriages in May were below the average number in the other months, May being for some reason or other very generally regarded as a month of ill-omen for wedlock. The feeling against marrying in May is not easy of explanation. It is not common to all countries. On the contrary, in Germany, in Denmark, and in Switzerland, this month appears from the Table to be a favourite time for weddings. That it is attributable to May being "the Virgin's month" seems scarcely compatible with the fact that in Catholic France, where such a cause would be expected to have much more influence than in Protestant England, the May marriages are slightly in excess. Not impossibly the custom may be a survival from Roman times; for in ancient Rome also it was deemed to be unlucky to wed in May, it is said because the Lemuria, or festival of the Departed Souls, was held in that month.

"Mense malas Maio nubere vulgus ait."—(OVID).

In Scotland the marriages in May are in even smaller proportion than in England. The Registrar General of that country, however, attributes this neither to religion nor to superstition, but simply to the fact, that in Scotland May is the month in which it is customary to change servants and to give up farms and houses, so that there is but little leisure time left for connubiality.* In both the county and the town the marriages were few in each of the first three months of the year, partly because of the clearing off which had occurred in the immediately preceding December, partly because there was no great public festival time in any one of these three months, and partly because of the incidence of Lent, the greater part of which season fell in March.

* The marriage of Mary Queen of Scotland to Bothwell was celebrated at Holyrood in May. The next morning the line quoted above from Ovid was found written on the gate of the palace. Some writers have ascribed to the memory of this ill-omened match the Scotch aversion to May weddings. Cf. Schiern's *Life of Earl of Bothwell*, p. 257.

There are not only favourite months for weddings, but also favourite days, as is shown in the following table :—

TABLE E.—MARRIAGES ON each DAY of WEEK, per 1000.

Day of Week.	Gloucestershire, 1881.	Manchester, 1881.	Certain English Districts, 1864.	Scotland, 1862.
Sunday - -	203	221	321	9
Monday - -	211	178	215	129
Tuesday - -	136	74	106	176
Wednesday - -	94	111	78	68
Thursday - -	123	105	87	120
Friday - -	20	24	22	433
Saturday - -	218	287	171	65

Saturday, Sunday, and Monday, are the favourite days for weddings, and, taking Gloucestershire, as before, to represent the entire country, these three days stand much on a par with each other; while in the purely urban population Saturday is far ahead of the other six. Comparing the above figures for 1881 with those for certain districts, mainly urban, in 1864, as given in the Annual Report for that year, and repeated in the above Table, Sunday is not so favourite a day for weddings as it was; its place being usurped to a great extent by Saturday. In both county and town, Friday is a day on which marriages are rare; and in this respect there is no diversity between the figures for 1864 and the more recent ones. Doubtless this marked dislike for Friday was originally founded on ecclesiastical restrictions, which have, however, degenerated in the vulgar mind into an unreasoning superstition against the day, as unlucky. That the aversion to it, however it arose, can no longer be attributed entirely to religious feeling (I say "not entirely," because the considerable diminution of marriages during Lent, both in the town and the county, shows that religious feelings are not without considerable influence in the matter), is clear from the fact, that the Friday which of all Fridays should be the most strictly observed, namely Good Friday, is exceptionally a favourite day for marriage, at any rate in towns; for whereas the average marriages in Manchester on other Fridays in the year 1881 numbered 2·18, on Good Friday there were as many as 36; while the average for all days in the year was but 17·04.

In this matter of days there is a strange contrast between England and Scotland, as was pointed out many years ago by the Scotch Registrar General (Supplement to Reports 1861-70, p. 40). In Scotland, as shown in Table E., nearly half the weddings are on Friday, while the strict Puritanical notion as to the sacredness of the Sabbath, and in a less degree of the Sabbath-eve, practically stops all marriages on Sundays, and reduces those on Saturday to a very low figure.*

In Scotland the day of days for weddings is December 31st, owing to the first day of the year being a general holiday, so that the wedded pair have a whole day's holiday before them. On that single day no less than 5·35 per cent. of all the marriages in the year are contracted. In England, where the first day of the year is not a general holiday, nothing of the kind occurs. The marriages on December 31st, 1881, which fell on Saturday, were, it is true, somewhat above the average of other Saturdays, but in

* In Scotland most marriages are celebrated in private houses and in the evening, not as with us in Church and in the morning. As Sunday and Saturday evening are deemed unsuitable for weddings on religious grounds, Friday evening becomes the most convenient time, followed as it is by the half holiday of Saturday, and the whole holiday of Sunday.

no remarkable degree. The favourite days in England appear to be Christmas Day, Easter Monday, and Whit Monday, with the days preceding and following them, and, after these, the Bank holiday on the first Monday in August.

Forms of Marriage.—Of the 197,290 marriages celebrated in 1881, 140,995, or 71·5 per cent., were solemnised according to the rites of the Established Church, and 56,295, or 28·5 per cent., otherwise. The proportion of Established Church marriages was very slightly lower than in the immediately preceding year, and this slight decline was entirely due to an increase in the proportion of Roman Catholic marriages, which was higher than in any year since 1866. The subjoined Table shows the proportion of marriages in the Established Church, by license, banns, and Superintendent Registrars' certificate. It will be noted that the proportion of marriages by banns continued to increase, and at the expense of marriages by license.

TABLE F.—OF the MARRIAGES CELEBRATED in the ESTABLISHED CHURCH, the PROPORTION PER CENT. by SPECIAL LICENSE, LICENSE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841–81.

Year 1881 - -	100	·04	9·61	87·76	2·59

* The Church marriages not otherwise described have been proportionally distributed over the headings "Special License," "License," &c.

In 524 church marriages, the particulars required for the accurate construction of the foregoing Table were not furnished, owing to the negligence of the officiating clergymen.

Of the 56,295 marriages, not according to the rites of the Establishment, 8784, or 15·6 per cent. were solemnised in Roman Catholic places of worship, 50 were marriages according to Quaker rites, 21,922, or 38·9 per cent., were solemnised in the chapels of other Christian denominations, 484 were marriages of Jews, and 25,055, or 44·5 per cent., were marriages in the offices of the Superintendent Registrars.

First Marriages; Re-marriages. Males.—Of the 197,290 men who married in 1881, 172,122, or 87·2 per cent. were bachelors,* while 25,168, or 12·8 per cent., were widowers.

Of the 172,122 bachelors, 163,871, or 95·2 per cent., married spinsters, while 8251, or 4·8 per cent., married widows.

* The 51 divorced men who re-married in the year are here reckoned as bachelors and the 53 divorced women as spinsters.

Of the 25,168 widowers who re-married, 15,230, or 60·5 per cent., married spinsters, while 9938, or 39·5 per cent., married widows.

Females.—Of the 197,290 women who married, 179,101, or 90·8 per cent., were spinsters,* while 18,189, or 9·2 per cent., were widows.

Of the 179,101 spinsters, 163,871, or 91·5 per cent., married bachelors, while 15,230, or 8·5 per cent., married widowers.

Of the 18,189 widows who re-married, 8251, or 45·4 per cent., married bachelors, while 9938, or 54·6 per cent., married widowers.

Thus the re-marriages of widows were, as always, much fewer than the re-marriages of widowers, and while of widowers who re-married far the greater number married spinsters, among widows the reverse was the case, and the greater number were wedded to widowers.

Divorce.—The marriages of persons described as divorced, which had been increasing for many years until in 1880 they attained their maximum number of 117, declined again in 1881 to 103. It must be noted, however, that the figures given in the following Table refer only to persons described in the marriage register as divorced, and that very probably this description is not given in all cases in which it is applicable.

* See note, page xii.

Ages at Marriage.—In 32,316 cases the officiating minister or registrar neglected to insert the ages of both parties in the register. The mean age at marriage, as determined for the 164,974 couples whose ages were duly stated, was 28·0 years for the men, and 25·7 for the women. The mean age of the bachelors was 25·9 years, that of the spinsters 24·4. The mean age of bachelors and spinsters at marriage is remarkably constant, year after year. Once in the past 15 years, viz. in 1873, when the marriage-rate was at its maximum, the mean age of the bachelors was 25·6, and in 1881, as above stated, it was as high as 25·9, but in each other year it was either 25·7 or 25·8. The mean age also of spinsters in 1873, the year of maximum marriage-rate, was as low as 24·2, but in every other year it was either 24·3 or 24·4, or, on one occasion, viz. 1867, 24·5. The mean age of widowers who re-married was 43·4, and of widows 39·8 years.

Of the men who married in 1881, there were 341, of whom 14 were bachelors, who had passed the mature age of 70 years; and of the women who married there were 58, of whom 8 were spinsters, who were of similarly advanced age.

On the other hand 14,224 men and 42,138 women were under age when wedded, being 7·24 per cent. of all the bridegrooms, and 21·31 per cent. of all the brides. The proportion of minors who married was at its maximum for each sex in 1874, and has declined ever since, though, in the case of females, with some irregularity.

Signature in Marriage Register.—In the year 1850 the proportion of persons who at the time of marriage were unable to sign their names in the register was 38·7 per cent. From that date the proportion fell continuously for 29 years, with only one exception, viz. 1863, in which year the proportion remained exactly as it had been in the immediately preceding year. On no single occasion in these 29 years did the proportion of illiterate marriages increase. In 1880, however, for the first time a slight retrograde movement occurred quite unexpectedly. The proportion of illiterate brides and bridegrooms not only ceased to decline, but actually rose in a slight degree. In my report for that year it was pointed out that the probable explanation of this unexpected occurrence was that the revival of trade, which had led to a rise in the long depressed marriage-rate, had especially affected the lower strata of the wage-earning class, who are moved to matrimony by very trifling improvement in their pecuniary condition, and that it might be anticipated that the check was but temporary. This anticipation was realised; for the proportion of illiterates fell again in 1881 from 16·3 to 15·6 per cent. This proportion was, however, still much higher than the rapid progress made in previous years in the matter of elementary education would have led us to expect. Had the proportion of illiterates fallen as rapidly in the interval between 1879 and 1881, as it did in the interval between 1877 and 1879, the proportion of persons who could not write their names would have been 14·5 per cent., whereas, as already stated, it was in fact 15·6. It would appear, therefore, that the marriages in 1881 were still in more than usual proportion among the lower stratum of the working classes.

Buildings registered for the Solemnisation of Marriages.—The number of buildings registered for the solemnisation of marriages not according to the rites of the Established Church, and on the register at the end of the year 1881, was 8,827 (see Table 11), showing an increase of 214 during the year. Of this increase, Independents contributed 26, Baptists 27, Roman Catholics 17, Wesleyan Methodists (of all branches) 104, Calvinistic Methodists 12, and all other sects 28.

Certified Places of Worship.—There were 21,366 certified places of worship on the register on 31st December 1881, showing an increase of 580 during the year; there were 647 new buildings registered during the year, whereas 67 buildings were removed from the register by cancellation.

BIRTHS.

The total number of births registered in 1881 was 883,642, being in the proportion of 33·9 births to 1000 persons living.

This was the lowest birth-rate recorded since 1858, when the rate was 33·7. At that period, however, the registration of births was not compulsory, and doubtless a considerable number of births were omitted from the reckoning. The birth-rate was at its maximum in 1876, and fell uninterruptedly from that date, year by year, in natural accordance with the corresponding decline in the marriage-rate.

The rate varied greatly in different counties, being lowest in Herefordshire, Huntingdonshire, Cornwall, Dorsetshire, Devonshire, Rutlandshire, and Shropshire, in none of which was it above 29·5; and highest in Lancashire (36·1), Nottinghamshire (36·8), Staffordshire (38·0), and Durham (39·5). It will be seen by reference to a table in a former report (1879, Table G. p. xiv.) that, in each of the counties here mentioned as having a low birth-rate, the proportionate number of young married women is much below the average, while in each of the counties distinguished by a high birth-rate the contrary is the case.

Illegitimate births.—The illegitimate births numbered 43,120, being in the proportion of 4·9 to every 100 children born. This is a higher proportion than any recorded for six years previously, but is to be explained, not by any increase in the illegitimate births, but by a falling off in the legitimate births owing to the decline in marriages. The illegitimate birth-rate, that is, the proportion of such births to 1000 persons living, remained at the same point as it had been at for the six preceding years, namely, 1·7. It is satisfactory to note that, notwithstanding the long continued depression in the marriage-rate, the illegitimate birth-rate has remained unaffected throughout, and at its lowest level (Table 13). The counties, in which the proportion of children born out of wedlock to all births was the highest, were Shropshire, Cumberland, Norfolk, Herefordshire, and Westmorland; all of which are counties that are found to have had a like evil pre-eminence in the ten preceding years (Table 14).

Sex.—The male births numbered 450,180, and the female births numbered 433,462, so that the former were to the latter in the proportion of 103·9 to 100. This was a slightly higher proportion than in either of the two immediately preceding years, in each of which the proportion had been 103·6.

DEATHS.

The deaths registered in 1881 numbered 491,935, and, notwithstanding the increased population, were absolutely fewer than in any single one of the twelve preceding years. The death-rate was 18·9 per 1000 living; a rate which was no less than seven per cent. lower than the lowest recorded in any previous year since civil registration began. In 1877, when the lowest previous death-rate occurred, one person died out of every 49 living; in 1881 only one died out of 53.

There is nothing in the series of annual reports issued by this office that comes out more distinctly and unmistakably than the wonderful effect which the sanitary operations of the last decade have had in saving life. The Public Health Act came into operation in 1872. The average annual death-rate for the immediately preceding ten years (1862–71) had been 22·6, and there were no indications whatsoever of any tendency of the rate to fall lower. Indeed in 1871, the final year of this period, the rate was exactly the average, viz., 22·6. The Act came into force; and at

once the rate began to fall, and continued to fall year by year with almost unbroken regularity, until in 1881 it was, as above stated, no more than 18·9. Once only in the ten years that had elapsed since the Act came into operation was the rate as high as the average of the previous decade. That was in 1875, when the rate was 22·7. In that year a second Public Health Act, of more stringent character, came into operation; and from that date down to 1881 the death-rate did not once reach 22·0, and averaged no more than 20·5.

Had the fall in the death-rate been limited to a single year, or to two years, or even to three, it might have been argued by sceptical persons that the improvement was due to a succession of seasons favourable to health, or to other causes unconnected with sanitary administration, and that the setting-in of the fall coincidently with the coming-into-operation of public health measures was no more than casual; but in face of a fall, lasting for ten years in succession and increasing each year in amount, no one can seriously maintain such a position. There can be no real doubt that the saving effected in life was the direct product of the money and labour expended in sanitary improvements. Doubtless the money thus expended was enormous in amount; and it will be well therefore to consider what return it has brought in. If, then, the death-rate in 1881 had been only equal to the average death-rate in the decade preceding the Public Health Act of 1872, there would have died in the course of that one year 96,917 persons who, as it was, survived. From this total, however, a deduction must be made of some 5,000 for the following reason. The birth-rate in 1881 and in each of the two immediately preceding years was considerably below the average annual birth-rate in 1862-71. Consequently there was a smaller than average proportion of children in the first three years of life in the population of 1881. But the death-rate at this early period of life is always very high. Had the birth-rate in 1879, 1880, 1881 been equal to the average birth-rate in 1862-71, there would have been so many more young children living in 1881 as to have increased the deaths in that year by a number close upon 5,000. Instead, therefore, of 96,917 lives saved, we have only about 92,000.

Now we shall probably be well within the mark if we assume that for every fatal case of illness there are from four to five more cases which end in recovery. This is about the proportion in enteric fever, which is a more fatal disease than the average of diseases. The result, therefore, on this assumption would be that, speaking in round numbers, there were 500,000 fewer cases of illness, and 92,000 fewer deaths in England and Wales in 1881 than would have been the case had the population been living under the conditions that existed in 1862-71. It may perhaps be objected, and not unreasonably, that the year 1881, with its extraordinarily low death-rate, was so exceptional that it can hardly be taken as a fair sample by which to measure the annual return in life and health from the moneys spent in sanitary improvements. Let us then take the entire period of ten years that elapsed between the first Public Health Act and the close of 1881. Had the death-rate remained during that period at its mean level in the preceding decade, the total deaths from 1872 to 1881 inclusively would have been 5,548,116; whereas they were actually no more than 5,155,367. Thus no less than 392,749 persons who under the old regime would have died were, as a matter of fact, still living at the close of 1881.* Add to these saved lives the avoidance of at least four times as many attacks of non-fatal illness, and we have the total profits as yet received from our sanitary expenditure. Moreover, it is important to note that these profits were not equally spread over the ten years, but that there was a manifest tendency to progressive increase throughout the period.

* The mean birth-rates in the two decades 1862-71 and 1872-81 were almost exactly the same; so that no correction need be made in this case.

This is what might be anticipated; for the full effect of sanitary improvements requires time for development.

Locality.—The fall in the death-rate in 1881 was very general. There was no county, as may be seen in Table 20, in which the rate was not below the mean of the previous ten years, and scarcely one in which it was not the lowest rate in that period.

The death-rate in the urban population, consisting of some fifteen and a half million persons, was 20·3, while that of the rural population, comprising some ten and a half million persons, was 16·8. Of equal numbers living, (Table 47) there were 121 deaths in the urban districts to 100 deaths in the rural districts, which corresponded with the average proportion of the preceding decennium.

Sex.—Of the deaths registered in the year, 253,605 were of males, and 238,330 were of females. The male death-rate was 20·0, and the female death-rate was 17·8, the mean annual rates for the preceding decennium (1871–80) having been 22·8 and 20·1 respectively. Out of equal numbers living of each sex there died 1124 males to 1000 females. The average proportion for the preceding decennium was 1134 to 1000.

Age.—The decline in the death-rate was not only shared by all parts of the country, and by both sexes, but also by all periods of life. It was greatest, however, in the first period of life, among children under five years of age. It was especially great in the first year of life (see Table 27); for, while the mean infantile death-rate—that is, the proportion of deaths under one year to 1000 births—was 149 in 1871–80, the rate in 1881 was 130.

TABLE I.—ANNUAL DEATH-RATES at successive life-periods, per 1000 persons living at each period.

YEAR.	All ages.	0—	5—	10—	15—	20—	25—	35—	45—	55—	65—	75—	85—

REGISTERED CAUSES OF DEATH.

The new Classification.—For some years past, three different classifications of the assigned causes of death have been used in the annual reports issued by this office. There was firstly, a long list, consisting of 273 headings, which was used for tabulating the causes of death in England and Wales as a whole (see pp. 146–155, 43rd Ann. Rep.) Secondly, there was a shorter list, consisting of 117 headings, which was used for the Registration Divisions and Counties (see pp. 162–185, 43rd Ann. Rep.), and which had this great defect, that the headings with special names, in many cases, did not stand for precisely the same causes of death as the

identically similar headings in the longer list. For instance, while the heading "laryngitis," in the longer list, stood exclusively for the disease called by that name, in the shorter list it also included "oedema glottidis," and "laryngismus stridulus," which were grouped with laryngitis for the sake of brevity. This shorter list was also used for the table of comparative mortality in successive years in all England and Wales (see Table 31, 43rd Ann. Rep.) Thirdly, the causes of death in all England and Wales were again classified according to the arrangement adopted in the nomenclature of the Royal College of Physicians of London (see Table 60, 43rd Ann. Rep.) The inconveniences of this triple classification are obvious, and, after mature consideration, it was determined to abandon it, and to substitute some one form of classification for the three. The classification which had the sanction and authority of the Royal College of Physicians was of course the one which naturally recommended itself for selection. But it unfortunately happened that the college was itself engaged in revising its former classification; and it was impossible to wait until this revision should be completed, because any important change in the classification used in the General Register Office must necessarily be made in the first year of a decade, owing to the requirements of the decennial supplement, the compilation of which would be rendered still more laborious than at present, or indeed would be practically impossible, if the tabulation of the successive years with which it deals, were not throughout identical, or nearly so, in form.

But, although the College of Physicians had not as yet published their revised nomenclature and classification, the arrangement, which would almost certainly be adopted by that body, was already known, if not in complete detail, yet in sufficient completeness for practical purposes; and it was therefore decided to adopt a form of classification which should follow the lines thus laid down by the chief medical authority in the country as nearly as might be, considering that neither the things to be classified nor the objects of the classification were precisely the same, and that limitation of space would necessarily involve some considerable shortening of the full college list.* In the first place the college classification includes all varieties of morbid affections, serious or slight, and of these the majority are never fatal, and therefore never appear among the causes of death, with which alone the General Register Office has to deal. On the other hand, a very large number of deaths are ascribed on the certificates to causes which are not recognised by the college as distinct diseases, but are vague indeterminate names, equally applicable to several distinct ailments. If the Royal College of Physicians, besides providing an authoritative nomenclature of diseases, could also prevail on medical men to use no other terms, in certifying as to causes of death, than those thus sanctioned, the tabulation of deaths would be carried out with much greater precision, and in a much more satisfactory manner, than is possible with the present lax use of medical terms. As to the careless manner in which the causes of death are too often stated in certificates, some observations will have to be made presently. For the present purpose it is sufficient to have pointed out that, while the college classification is of diseases, the classification of the General Register Office must be of *assigned* causes of death, and that these are far from being one and the same thing. Secondly, the objects aimed at by the College of Physicians and by the General Register Office in their classifications are not precisely the same. The classification of the college is, in the main, pathological, but the classification of the Register Office, intended, as it mainly is, for the use of those engaged in devising methods of prevention, should, so far

* The change of classification was made after due consultation with the Registrar General for Ireland, and it was agreed that the same system should be followed in both countries.

as possible, be ætiological. This difference of object especially affects the classification of injuries. The College classifies these by their nature and position, but takes no cognizance of the cause to which they were due. A man has, let us say, a cut on the head, which lays bare the bone; this is classified by the college list as, "a scalp-wound; bone exposed," and there is an end of the matter. Whether the wound was accidental or homicidal or self-inflicted is, of course, from the purely medical point of view a matter of complete indifference. But this consideration, pathologically so unimportant, is practically the only one, or at any rate the chief one, that is of interest from any other point of view than the strictly medical. How many persons are murdered, how many commit suicide, how many meet their deaths from accidents of various kinds, are points of much more importance to the general public and to those who are studying how to increase the security of life, than how many die from injuries to this or that distinct part of the body, or from this or that special kind of wound.

The College, again, give no names to their groups or sub-groups of diseases. To follow this example would, however, cause great practical inconvenience in an office where more than half a million of deaths have to be sorted out annually, and where the various groups and sub-groups have repeatedly to be referred to and spoken of in some way or other. Names, therefore, have been attached to the several groups and sub-groups, and, in selecting these, regard has of course been paid, so far as possible, to former usage in the annual reports. Doubtless some of the names thus given are open to considerable criticism, especially on the part of those who expect that a name shall not serve merely as a convenient distinguishing mark, but shall express with unexceptional accuracy the nature of the thing or things to which it is attached. When such more suitable names shall have been found, it will be easy to substitute them for those now adopted, which must therefore be looked on as merely provisional.

Very probably there may be some other small points in which the classification, now adopted for the annual reports, may, for the sake of convenience or of brevity, be somewhat different from that of the College of Physicians. But speaking generally, and with the exceptions already mentioned, the lines laid down by the college have been followed throughout.

One of the most important uses of a classification of deaths by their alleged causes, when it has been carried out year after year for a considerable period, is that it enables those who are engaged in preventive medicine, or who are studying the natural history of diseases, to compare the mortality from each cause in successive years, and thus to test, in some measure, the effect of sanitary interference, of climatic differences, and of other agencies by which the prevalence of diseases may be affected. It is of course impossible to make any notable change in the system of classification without interfering, more or less, with the possibility of such serial comparisons. It may, however, be noted that, even when the same mode of classification is maintained throughout, without any modification whatsoever, large allowances have to be made for the changing fashion or caprices of medical nomenclature. There are times, for instance, to give a single example, when the ordinary medical attendant designates all deaths from vaguely diagnosed affections of the respiratory organs as bronchitis, and other times when he prefers to designate them all as pneumonia. Allowance has also to be made for the greater precision in diagnosis, which the advance of medical science brings about, and which causes a constant increase in the number of deaths ascribed to definite causes at the expense of deaths of which the causes are indefinitely described. Under these circumstances it may be laid down as a general rule that the serial comparison of mortality from any specified cause, in

successive years, is but of little value, unless the particular disease concerning which the investigation is made be some well marked form and such as can be readily recognised by the ordinary practitioner, or unless the inquiry relate, not to some one special disease, but to some large natural group of diseases taken together, such as diseases of the nervous system, or diseases of the respiratory organs. Statistics must not be pressed into services, to which the imperfection of the data on which they are based renders them inadequate.

If these considerations, as to the limits within which comparisons can be fruitfully made between the mortality figures of successive years, be borne in mind, the changes of classification now introduced will be found to offer no material hindrance to such comparisons. Tables have been made (Tables 31-32) in which such comparisons have been carried back for 24 years, for the chief diseases or groups of diseases in the new classification; and, in addition, a further Table has been added (pp. xxix-xxxiv) in which all the modifications that have been made, and by which individual headings are affected, are described in detail.

Inadequate Certification of Causes.—In order that deaths may be properly tabulated by their causes, the first requisite is of course that these causes shall be stated on the certificates with due accuracy and in sufficient detail. Unfortunately in a considerable proportion of cases this elementary condition is far from being satisfied. Not rarely the real cause of death is purposely disguised in order to spare the susceptibilities of friends, or, it may be, to conceal the existence of infectious disease. There can, for instance, be no doubt that a very large proportion of such deaths as occur from congenital syphilis are returned not under that name, but under the vague term atrophy, innutrition, wasting, congenital weakness, cachexia, and the like. More frequently, however, the deficiencies in the certificates are not intentional but due to carelessness, the cause being stated with such insufficiency or in so vague a manner that it is impossible to say to what heading the deaths should be referred. To ascribe a death to "natural causes," to "blood disease," to "constitutional disease," to "congestion" or the like, is to give information, which, however true, is not worth the trouble of tabulation. Scarcely more satisfactory is such an assigned cause as "hæmorrhage," which is of frequent occurrence. Deaths from flooding in childbirth, from an incised wound of an artery, from rupture of an aneurism, from hæmatemesis caused by ulcer of stomach, and from numerous other causes may, one and all, be said to be due to hæmorrhage. But to lump all these diverse cases together under one heading, and to state the total result, would be to give, at the cost of much labour, information of no possible value. Much the same may be said of such causes, when assigned without further particulars, as "peritonitis," "blood poisoning," "tumour," "dropsy," "convulsions," and the like. Yet a vast number of certificates are of this character. An effort was made this year to remedy this evil, and to get greater precision in the statement of causes. With this object letters of inquiry were sent out to medical men who had given certificates in which the causes of death were imperfectly stated, asking for further particulars. The exigencies of office work did not allow of this being done to more than a very limited extent. Still a beginning was made; and it is hoped that the practice now introduced may, by calling the attention of the profession to the matter, induce medical men to recognise the importance of stating the causes of death with greater precision. In all some 1200 letters of inquiry were sent out, and with some few exceptions elicited the requisite information. How necessary some such step had become may be inferred from some of the results of these inquiries.

For instance, 183 letters of inquiry were sent out relating to cases in which the assigned cause was simply pyæmia, septicæmia, or blood-poisoning, without further particulars. The results were as follow :—

In 55 cases, the cause of the condition was unknown.

In 3 " ditto, but in parturient women.

In 89 " the cause was puerperal.

In 11 " the cause was cut, stab, or other injury.

In 21 " the cause was small-pox, erysipelas, scarlet-fever, or other assignable disease.

In 4 " no further information was given in the reply.

Again, 321 letters of inquiry were sent out as to cases in which the assigned cause was "peritonitis" only, the cases selected for inquiry being those of women of child-bearing ages. The results were as follow :—

In 155 cases, no special cause for the peritonitis was known.

In 136 " the peritonitis was puerperal.

In 14 " the peritonitis was consequent on disease of uterus or ovaries.

In 12 " the peritonitis was due to cancer, hernia, enteric fever, or other assignable disease.

In 4 " no further information was given in the reply.

To what a serious extent our statistics are affected by the vagueness of certificates, or by the omission of the most important particulars may be further illustrated by the following figures : The 1200 letters of inquiry sent out in the year resulted in the addition of 269 deaths to the heading "puerperal fever," of 61 more deaths to the heading "accidents of childbirth,"* and of 18 more to the total of "childbirth associated with other diseases." To the heading "tabes mesenterica" there resulted an addition of 87 deaths, and to "syphilis" of 24 deaths. Among the assigned causes of death one of the most unsatisfactory, not only because of its insufficiency but because of the great frequency with which it occurs, is "dropsy." This of course is a symptom of a great number of very diverse diseases, renal, pulmonary, hepatic, and cardiac. Yet in no less than 1882 cases during the year "dropsy" was the assigned cause, without further particulars as to its origin. These 1882 certificates were scarcely more than so much waste paper, so far as classification of deaths by causes is concerned. Seeing that the main object of the expenditure of labour and money in the tabulation of causes of death is the advance of medical knowledge, surely it is not too much to expect that medical practitioners shall not fill in their certificates in so careless a manner, as to render any accurate tabulation an impossibility.

One class of cases there is where at any rate it might be expected that full information would be forthcoming, namely, those cases in which a special inquiry is held at the public expense, in order to ascertain the cause of death. Unfortunately, however, many coroners appear to think that the exclusive object of an inquest is to ascertain whether a crime has been committed, and ignore altogether the other purposes, scientific and medical, to which inquests are intended to be subservient. Such vague findings as "natural causes," "died by visitation of God," "sudden death," and the like, may possibly satisfy the requirements of criminal law, but are utterly inadequate for all other purposes, and cannot be considered as really fulfilling the requirement of the Act, that the coroner shall state in his certificate what was the cause of death. How often verdicts are vitiated by such imperfections may be judged from the following particulars relating to the verdicts in inquest cases held in one division in 1881.

* One half of the apparent increase (Table 44) in the mortality of women in childbirth in 1881 as compared with 1880 was due to the 330 additional deaths discovered by these letters of inquiry.

There were in all 983 inquests. In 144 of these the verdict was simply "natural causes;" in 13 "visitation of God," in 14 "found dead." In 25 cases the death was ascribed to accident, but the kind of accident was either not stated at all, or insufficiently for classification. In 11 cases the verdict was "suicide," and in 5 cases murder or manslaughter, without any statement of the method employed. It is unnecessary to go any further with this analysis of verdicts. The examples given sufficiently show that in a large proportion of cases the cause of death is inadequately stated, and that the public is consequently deprived of a considerable part of the advantages which it is entitled to expect in return for its expenditure upon inquests.

The assigned causes of death were distributed in the several classes as follows :—

TABLE K.—MORTALITY FROM THE VARIOUS CLASSES OF DISEASES.

Causes of Death.	Total Deaths in 1881.	Rate per Million living.		Decrease or Increase per cent. of Rate in 1881.
		1881.	Mean annual, 1871-80.	
Zymotic diseases - - -	69,313	2660·2	3727·0	-28·0
Parasitic diseases - - -	1,019	39·1	57·1	-31·5
Dietic diseases - - -	1,704	65·4	63·0	+4·0
Constitutional diseases - -	86,709	3327·8	3596·8	-7·0
Developmental diseases - -	41,244	1582·9	1675·8	-5·0
Local diseases - - -	243,561	9347·8	9928·8	-5·5
Violence - - -	18,160	697·0	737·0	-4·9
Ill-defined and not specified causes -	30,225	1160·0	1610·8	-21·2
All causes - - -	491,935	18880·2	21396·3	-11·8

Due correction has been made in this table for the changes introduced into the classification, so that the mortality under each class of causes in 1881 is strictly comparable with the mortality assigned to the corresponding class for 1871-80; and it will be noted that, with the unimportant exception of dietic diseases, there was a decline of mortality in each class in 1881, as compared with the mean of the preceding decade.

*Zymotic or Specific Febrile Diseases.**—The deaths ascribed to this class of causes were 69,313, being in the proportion of 2660 to a million persons living, a rate no less than 28 per cent. below the average rate of the preceding decade. The reduction was shared (see Tables 31, 32) by nearly every disease included in the class. Thus the death-rate from enteric fever fell from a mean of 326 per million to 212, to which number however 6 more must be added, making 218, in order to compensate for the fact that deaths under five years of age ascribed to remittent fever were formerly

* Tables (35, 36), which will be found convenient for reference, have been added to this year's report, giving the total number of deaths, and the rate per 1000 living, from each of the principal zymotic diseases for each year since civil registration began. One table deals with all England and Wales, the other with London separately.

placed to enteric fever, but go now to the heading "remittent fever." The rate from typhus also fell from 58 to 21, and that from other or ill-defined forms of continued fever from 105 to 44. Measles, scarlet fever, and whooping-cough, also showed great diminution and, though the mortality from small-pox, owing to the outbreak in London, was greater than it had been for some years, it was nevertheless below the decennial mean. There was also a great falling off in the mortality from diarrhoea, dysentery, and simple cholera. The absence of any long continuance of hot weather in the summer of 1881 reduced the deaths from these bowel disorders to 570 per million persons living, whereas the mean annual rate during the preceding decade had been 943.

There were, however, some exceptions to this nearly universal decrease of mortality. One such exception was presented by diphtheria, the deaths from which disease were 121 per million persons living, which had also been the mean rate in the preceding decade. In these annual reports those deaths only are tabulated as due to diphtheria, in which the cause of death is distinctly designated on the certificate as diphtheria or cynanche maligna or malignant sore-throat. As this rule has been observed throughout the whole series, we may safely use the figures in successive reports for comparative purposes. There can, however, be no doubt that a large proportion of the deaths which were in reality due to diphtheria are returned under other titles, such as ulcerated throat, quinsy, laryngitis, and especially as croup. On this account in previous reports croup and quinsy were placed among the zymotic diseases and next to diphtheria. They have been now removed from that position in deference to the classification of the College of Physicians and placed elsewhere; but, be the true nature of these ailments and their correct nosological position what it may, in any attempted estimate of the actual amount of mortality from diphtheria, the indisputable fact of its being very often returned as croup, or as quinsy, or the like, must be borne in mind.

Another heading under which there was no reduction of mortality, and even an increase above the average, was puerperal fever. Some part of this increase may have been real, but in part the rise was only apparent, being due to the system introduced this year, and already mentioned, of sending out letters of inquiry in regard to deaths ascribed to peritonitis and the like, by which 269 additional deaths, which in former years would have gone elsewhere, were added to puerperal fever.

Parasitic diseases.—The mortality in this small class fell from a mean rate of 57 to one of 39 per million. This decline was due to a great diminution in the deaths ascribed to the somewhat vaguely used term "thrush," the falling off under this heading probably betokening more careful diagnosis and certification of causes.

Dietic diseases.—In this small class there was exceptionally a slight increase of mortality; and it will be seen in Tables 31 and 32, that the increase was under the heading "intemperance." For notwithstanding the diminished consumption of alcoholic drinks, to which returns printed in the Statistical Abstract bear witness, the deaths ascribed to "chronic alcoholism" or to "delirium tremens" were more numerous in proportion to the population than in any of the 24 previous years, with three exceptions. Not impossibly this apparent increase of mortality may, like the diminution under the heading "thrush," be simply due to somewhat more careful certification of causes.

Constitutional diseases.—The death-rate from this class of diseases fell 7 per cent. from the previous decennial average; the chief decline being under the headings "phthisis" and "other tubercular diseases," from which the mortality was at the minimum point as yet reached. On the other

hand the death-rates from cancer and also from diabetes were at their maxima, doubtless owing to increased accuracy of diagnosis, by which the deaths ascribed to definite causes are always increasing at the expense of the indefinite class.

Developmental diseases.—This class, as now constituted, comprises affections that are confined to the two extreme poles of life, to the earliest infancy or even intra-uterine existence at one end, and to old age at the other. The deaths ascribed to senility were far below the decennial mean, partly because old age shared with other periods of life in the general reduction of mortality, and still more because for some years there has been an increasing habit of stating the actual disease to which old persons have succumbed, instead of ascribing such deaths simply to old age. In this respect doubtless there is still much room for improvement, seeing that even in 1881 there were 25 deaths ascribed simply to old age, though the deceased had not yet passed the 55th year of life, and 729 more of persons who were not over 65. The deaths ascribed to premature birth and to congenital malformations, when measured by their proportion to a million persons living, agreed very closely in number with the decennial mean; but, when measured by the more satisfactory method of the proportion borne by them to births, were in excess. For in the preceding decade there had been 15,128 such deaths to a million births, whereas in 1881 the proportion rose to 16,120.

Local diseases.—In this great class of diseases, which comprises all those which are localised in special organs or systems of organs, and to which nearly half the entire number of deaths is ascribed, there was a diminution of 5.6 per cent. in the death-rate in 1881 as compared with the preceding decade. The main decline was in the sub-group "Diseases of the Respiratory Organs," where the recorded deaths were in the ratio of 3565 per million persons living, against a mean annual rate of 3913 for the preceding decade, in only one of which ten years, viz., 1872, was the rate as low as in 1881. This decline was the more noticeable, inasmuch as the year 1881 was remarkable for the frequent snow-storms that occurred in its first and last quarters, and was more than usually cold, the temperature in the first quarter having been 3.1° F. below the mean of the ten preceding first quarters. On the other hand the year 1872, in which alone the mortality from this sub-group of diseases was lower than in 1881, was unusually warm.

The only other headings in this class which call for any notice are "convulsions" and "childbirth." The deaths ascribed simply to convulsions, without any further statement as to the cause to which this symptom was due, had been diminishing year by year, and it is satisfactory to note that in 1881 the deaths, thus inadequately described, were fewer than on any previous occasion. The deaths from childbirth, irrespectively of puerperal fever, bore a much smaller proportion to the total population than had been the case in the previous decade, the rate having fallen from a mean of 94 to one of 74 per million persons living. But this method of comparison, though applicable to most diseases, is clearly unsuited for this special cause of death. The deaths from childbirth must be put into comparison with the number of deliveries, or, what comes practically to the same thing, with the number of births, or rather in this country, where the still-born are not registered, with the number of children born alive. Even, however, when measured in this way the deaths from childbirth in 1881 were below the decennial average, though they were very slightly more numerous than in any one of the three immediately preceding years. (Table 44.) But even this slight apparent increase disappears, when we take into account the addition made to the deaths under this heading by the letters of inquiry, previously mentioned; for, when this correction is made, it will be

found that the deaths ascribed to childbirth remained in 1881 at the same point as they had been for the three immediately preceding years, namely, 2·1 deaths of mothers to 1000 children born alive. When the deaths from puerperal fever are also taken into account, the result is very different; the rate from the two was 4·8 deaths of mothers to 1000 live-born infants, a rate which, had no letters of inquiry been sent out, would have been only 4·4, but which, even when this reduction has been made, was higher than had been the case in any one of the four preceding years.

It need hardly be pointed out that statistics of childbirth mortality such as these, based as they are on such imperfect data, must be used with extreme caution even for the purpose of comparing one year with another, and must be entirely rejected as furnishing any sure basis for estimating the actual mortality due to childbirth in any one year.

Violence.—The deaths from violence were 5·4 per cent. below the decennial mean. The gain was under the heading “accident and negligence,” the deaths from suicide being in excess, as had been the case also for several previous years. (See Annual Report 1880.)

Ill-defined and not specified causes.—One death out of every 16 fell into this class. This was, however, a considerable improvement upon the previous decade. As, moreover, the improvement in the statement of causes had been progressive for many years, it is to be hoped that this unsatisfactory class may be eventually reduced to very narrow limits.

Certification of the Causes of Death.—During the year 1881 the causes of 444,483 or 90·4 per cent. of the 491,935 deaths were certified by registered medical practitioners; while the causes of 27,258 or 5·5 per cent. were certified by coroners. The causes of the remaining 20,194, or 4·1 per cent. of the total deaths were not certified. The proportion of uncertified deaths varied very considerably in different parts of England and Wales. In the Metropolis the proportion did not exceed 1·3 per cent. Excluding the metropolitan counties of Middlesex and Surrey, the per-centage did not exceed 0·8 in Wiltshire and 1·7 in Hampshire, while it ranged upwards to 6·7 in Huntingdonshire, 7·0 in Cornwall, 7·2 in Durham, and 7·5 in Herefordshire. In Wales the proportion was 11·0 per cent.

It is satisfactory to note a further slight decline in the proportion of uncertified deaths in 1881, compared with those in 1879 and 1880, which were 4·7 and 4·3 per cent. respectively.

PROGRESS OF REGISTRATION.

During the year 1881 the number of names added to the printed alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales was 1,770,157. At the close of the year the aggregate number of names in these indexes, which at the close of 1881 embraced a period of 44½ years, was 64,804,797. The total number of searches in 1881 (including those in non-parochial and other records) was 31,600, showing an increase of 1059 or 3·5 per cent. upon the number in the previous year; the number of certificates issued was 26,572, or 1691 more than in 1880. The amount received as fees for searches and certificates in the year 1881, and paid into Her Majesty's Exchequer, was 4,976*l.* 12*s.* 6*d.*

For a list of the various public registers and records lodged in the General Register Office, Somerset House, see the Registrar-General's 34th Annual Report, pp. xxi-xxii and xxv-xxvi.

MORTALITY OF THE ARMY.

From returns with which I have been favoured by His Royal Highness the Field Marshal Commanding-in-Chief, it appears that the average strength of the Army at home and abroad was 188,798, and that the number of deaths was 2650; so that the rate of mortality was 14.0 per 1000, against 17.6 in 1880, 22.2 in 1879, and 11.2 in 1878.

The average strength of the Army at home was 91,946, and the deaths were 844; while the average strength of the Army abroad was 96,852, and the deaths were 1806. The death-rate at home was, therefore, 9.2 per 1000, and the death-rate abroad 18.6. (See Tables 55–60.)

MORTALITY OF THE NAVY.*

The total force in the service afloat, corrected for time, in 1881 was 44,400. The deaths were 486, and, of these, 234 were due to disease and 252 to violence, including one due to poison. The death-rate from disease was 5.27 per 1000, and from violence 5.67 per 1000, against 4.62 and 7.95 respectively in the immediately preceding year. The excessively high death-rate from violence in 1880 was due to the loss of the "*Atalanta*;" the corresponding rate in 1881, though much lower than this, was still abnormally high as compared with the average, owing to the large loss of life in the explosion of the "*Doterel*."

The assigned causes of the 234 deaths from disease were as follow:—

Eruptive fevers	-	-	5	Diseases of—		
Continued fevers	-	-	29	Circulatory system	-	24
Paroxysmal fevers	-	-	10	Respiratory system	-	54
Other febrile diseases	-	-	10	Digestive system	-	31
Syphilis	-	-	1	Urinary and generative		
Delirium tremens	-	-	3	system	-	10
Rheumatism	-	-	5	Organs of locomotion	-	2
Tubercular diseases	-	-	26	Cellular tissue, and cutaneous system	-	1
Other constitutional diseases	-	-	2	Debility, &c.	-	1
Diseases of nervous system and of organs of special sense	-	-	19	Poisoning by chloral hydrate	-	1

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships not in Her Majesty's Service, and of foreign vessels trading to or from any port in the United Kingdom, are required, under a penalty, to transmit returns of all births and deaths occurring on board to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, Scotland, or Ireland. Returns of a similar character are also received from the commanding officers of Her Majesty's ships. The certified copies of births and deaths thus received by me constitute the "*Marine Register Book*." During the year 1881 the entries recorded in this Register were 350 births and 5220 deaths. Of these 5220 deaths, 2098 were returned as of English origin, and 341 were simply described as of "British" origin.

* The facts in this paragraph are derived from Dr. Lloyd's Report to the Director General of the Medical Department of the Navy.

Among *passengers* on board merchant vessels at sea (see Table 63), 169 births and 612 deaths were reported during 1881; the deaths showed a marked increase upon the number returned in the preceding year.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports (see Table 64), that the number of merchant seamen at sea in registered vessels during 1881 was 192,903, showing a further slight decline from the steadily decreasing numbers in the seven preceding years; in 1874 the number of merchant seamen was reported to be 203,606. The deaths from all causes among these merchant seamen during 1881 were 4464, equal to a rate of 23·1 per 1000 of the strength, which exceeded by 1·7 the average annual rate (21·4) during the 30 years 1852–81.

EUROPEAN STATES.

In Tables 74–88 will be found international vital statistics relating to thirteen of the principal European States, published in accordance with a resolution of the Statistical Congress, held at St. Petersburg in 1872. Table 74 affords the means for comparing the marriage, birth, and death rates in each State in a series of years, with the mean rate in each series. The following tables contain detailed returns for each State.

The *marriage-rate* in 1881 showed generally a recovery from the depressed rates in recent years; this recovery was most marked in Austria and Hungary, and in Italy. The rates in those States furnishing returns ranged from 12·4 in Sweden to 19·8 in Hungary.

The *birth-rate* in the various States varied still more widely, ranging from 29·1 and 29·8 in Sweden and Switzerland, to 38·0 in Italy, 38·7 in Austria, and 43·7 in Hungary. No return has been received from France for 1881, but judging by the returns in previous years the birth-rate was lower than in any other European State. In Italy the birth-rate, as well as the marriage-rate, showed a marked increase in 1881 upon the rates recorded in recent years.

The *death-rates* in 1881 in those European States furnishing returns were, without a single exception, below the respective average rates in preceding years, and in most cases they were below the rates prevailing in 1880. The lowest rates were 17·7 in Sweden and 18·3 in Denmark, whereas the rates ranged upwards in the other States to 27·2 in Italy, 30·6 in Austria, and 35·6 in Hungary.

I have the honour to be,

Sir,

Your faithful servant,

BRYDGES P. HENNIKER,

Registrar-General.

APPENDIX TO REPORT.

ALPHABETICAL LIST of DISEASES affected by the CHANGES of CLASSIFICATION adopted in the present REPORT.

Reference Number.	Name of Disease.	Heading to which referred in Old Classification.		Heading to which referred in New Classification.
		In Shorter List.*	In Extended List † and in Supplementary Table.	
1	Abortion	Childbirth	Abortion	Abortion, Miscarriage.
2	" Abscess " (See also 112.)	Causes ill-defined, or not specified.	Abscess, Tumour	Abscess.
3	Addison's Disease	Kidney Disease, &c.	Addison's Disease	Addison's Disease.
4	Adenitis <i>Anaurosis.</i> (See 38.)	Scrofula	Adenitis	Dis. of Lymphatic System.
5	Anæmia	Dropsy	Anæmia and Leucocythæmia.	Anæmia. Chlorosis, Leucocythæmia.
6	Angina Pectoris	Heart Disease, &c.	Angina Pectoris	Angina Pectoris.
7	Anus, Imperforate <i>Apoplexy.</i> (See 14.)	Other Malformations	Anus Imperforatus	Imperforate Anus.
8	Atelectasis	Lung Disease, &c.	Lung Disease (undistinguished).	Atelectasis.
9	Bedsore	Mortification	Bedsore	Ulcer, Bedsore.
10	Bladder, Catarrh of	Cystitis	Catarrh of the Bladder	Dis. of Bladder and of Prostate.
11	Bladder, Disease of (See also 10, 29, 109.)	Kidney Disease, &c.	Bladder Disease	Dis. of Bladder and of Prostate.
12	Boil	Carbuncle	Boil	Other Dis. of Integumentary System.
13	Bowels, Obstruction of	Ileus	Obstruction of Bowels	Ileus, Obstruction of Intestine.
14	Brain, Congestion of <i>Brain, Disease of.</i> (See 38, 64, 81, 82, 88, 89, 128.)	Apoplexy	Apoplexy	Other Dis. of Nervous System.
15	Brain Fever	Simple Continued Fever	Simple Continued Fever	Inflammation of Brain or its Membranes.
16	Breast Abscess <i>Breast Milk, Want of.</i> (See 66.)	Childbirth	Breast Abscess	Other Accidents of Childbirth.
17	Bronchocele	Purpura and Scurvy	Bronchocele	Bronchocele.
18	Cæsarian Operation <i>Calculus.</i> (See 48.) <i>Cancer.</i> (See 59, 42, 72, 76, 107, 132.)	Childbirth	Cæsarian Operation	Other Accidents of Childbirth.
19	Cancerum Oris (See also 83.) <i>Carbuncle.</i> (See 12.)	Cancerum Oris (Noma)	Cancerum Oris (Noma)	Stomatitis.
20	Carditis	Pericarditis	Carditis	Endocarditis, Valvular

* See pp. 162-185 and Table 31 in 43rd Annual Report.

† See pp. 146-165 in 43rd Annual Report. The Supplementary Table was used in the Annual Reports previous to the 36th, and was then incorporated with the Shorter List to form the Extended List.

Reference Number.	Name of Disease.	Heading to which referred in Old Classification.		Heading to which referred in New Classification.
		In Shorter List.	In Extended List and in Supplementary Table.	
	<i>Caries.</i> (See 70, 110.)			
	<i>Cataract.</i> (See 58.)			
	<i>Cephalitis.</i> (See 80.)			
21	Cerebro-spinal Fever -	Typhus Fever - -	Cerebro Spinal Fever -	Cerebro-spinal Fever.
22	Cerebro-spinal Meningitis.	Cephalitis - - -	Myelitis - - -	Inflammation of Brain or its Membranes.
	<i>Charbon.</i> (See 129.)			
23	Chickenpox - -	Other Zymotic Diseases	Chicken-pox - - -	Chicken pox.
	<i>Childbirth, Accidents of.</i> (See 1, 16, 18, 40, 41, 78, 96, 102, 104, 105, 111, 112, 139.)			
24	Chlorosis - - -	Paramenia - - -	Chlorosis - - -	Anæmia, Chlorosis, Leucocythæmia.
25	Cirrhosis of Liver -	Liver Disease, &c. -	Cirrhosis - - -	Cirrhosis of Liver.
26	Cleft Palate - -	Other Malformations -	Cleft Palate - - -	Cleft Palate, Harelip.
27	Cowpox - - -	Other Zymotic Diseases	Cow-pox - - -	Cowpox and other effects of Vaccination.
28	Cynanche Maligna -	Diphtheria - - -	Cynanche Maligna -	Diphtheria.
29	Cystitis - - -	Cystitis - - -	Cystitis - - -	Dis. of Bladder and of Prostate.
	<i>Diphtheria.</i> (See 28.)			
	<i>Dropsy.</i> (See 5, 61, 69.)			
30	Dyspepsia - - - (See also 115.)	Stomach Disease, &c. -	Dyspepsia - - -	Dyspepsia.
31	Eczema - - -	Skin Disease, &c. -	Eczema - - -	Eczema.
32	Embolism - - -	Heart Disease, &c. -	Embolism and Thrombosis.	Embolism, Thrombosis.
33	Empyema - - -	Pleurisy - - -	Empyema - - -	Pleurisy.
34	Endocarditis - -	Pericarditis - - -	Endocarditis - - -	Endocarditis, Valvular Disease.
	<i>Enteric Fever.</i> (See 117.)			
	<i>Enteritis.</i> (See 47, 85, 100, 131.)			
	<i>Epilepsy.</i> (See 62.)			
35	Epistaxis - - -	Lung Disease, &c. -	Epistaxis - - -	Epistaxis and Dis. of Noe.
36	Erysipelas after Vaccination.	Erysipelas - - -	Erysipelas after Vaccination.	Cowpox and other effects of Vaccination.
37	Erythema - - -	Other Zymotic Diseases	Erythema - - -	Other Dis. of Integumentary System.
38	Eye, Diseases of -	Brain Disease, &c. -	{ Ophthalmia. Cataract. Amaurosis. Glaucoma. }	Ophthalmia and Dis. of Eye.
39	Fibroid Tumour -	Cancer - - -	Cancer - - -	Tumour (if localised, classed to organ affected).
40	Flooding - - -	Childbirth - - -	Flooding - - -	Placenta Prævia. Flooding

Reference Number.	Name of Disease.	Heading to which referred in Old Classification.		Heading to which referred to New Classification.
		In Shorter List.	In Extended List and in Supplementary Table.	
41	Foriation. Extra- Uterine.	Childbirth - -	Extra-uterine Foriation	Other accidents of Childbirth.
42	Fungus Hæmatodes -	Cancer - - -	Fungus Hæmatodes -	Cancer.
43	Gallstones - -	Jaundice - - -	Gallstone - - -	Gallstones.
44	Gangræna Senilis -	Mortification - -	Gangræna Senilis -	Senile Gangrene.
45	Gastritis - -	Gastritis - - -	Gastritis - - -	Dis. of Stomach.
46	General Paralysis - <i>Glaucoma.</i> (See 33.)	Paralysis - - -	Paralysis - - -	Insanity, General Pa- ralysis of Insane.
47	Glossitis - - <i>Gout.</i> (See 120.)	Enteritis - - -	Glossitis - - -	Stomatitis.
48	Gravel - - -	Calculus (Stone) -	Gravel - - -	Calculus.
49	Hæmatemesis - -	Stomach Disease, &c. -	Hæmatemesis - -	Hæmatemesis.
50	Hæmatocele - -	Uterus Disease, &c. -	Hæmatocele - -	<i>In Males</i> —Dis. of Testes, Penis, Scrotum, &c. <i>In Females</i> —Dis. of Uterus and Vagina. Hæmaturia.
51	Hæmaturia - -	Kidney Disease, &c. -	Hæmaturia - -	
52	Hæmoptysis - -	Phthisis - - -	Hæmoptysis - -	Phthisis.
53	Hæmorrhæge - -	Heart Disease, &c. -	Heart Disease (undis- tinguished).	Hæmorrhægo.
54	Harelip - - -	Other Malformations -	Hare Lip - - -	Cleft Palate, Harelip.
55	Heart, Hypertrophy of	Heart Disease, &c. -	Hypertrophy of Heart	Hypertrophy of Heart.
56	Hemiplegia - -	Paralysis - - -	Paralysis - - -	Hemiplegia, Brain Pa- ralysis.
57	Hepatitis - - -	Hepatitis - - -	Hepatitis - - -	Other Dis. of Liver.
58	Hydatid Disease -	Worms, &c. - -	Hydatids - - -	Hydatid Disease.
59	Hydrocele - - -	Uterus Disease, &c. -	Hydrocele - - -	Dis. of Testes, Penis, Scrotum, &c.
60	Hydrocephalus (chronic).	Hydrocephalus -	Hydrocephalus (Tuber- cular Meningitis).	Other Dis. of Nervous System.
61	Hydropericardium -	Dropsy - - -	Hydropericardium -	Dropsy.
62	Hysteria - - -	Epilepsy - - -	Hysteria - - -	Other Dis. of Nervous System.
63	Hysteritis - - -	Uterus Disease, &c. -	Hysteritis - - -	Dis. of Uterus and Va- gina.
64	Idiopathic Tetanus - <i>Itens.</i> (See 13.)	Brain Disease, &c. -	Idiopathic Tetanus -	Idiopathic Tetanus.
65	Inanition - - - <i>Insanity.</i> (See 46.)	Want of Breast Milk -	Inanition of Infancy -	Debility, Atrophy, In- anition.
66	Intestine, Perforation of. <i>Intestine, Ulcer of.</i> (See 65, 130.)	Ulceration of Intestines	Perforation of Intes- tines.	Ulceration of Intestine.
67	Jaundice - - - (See also 43.)	Jaundice - - -	Jaundice - - -	Other Dis. of Liver.
68	Laryngismus Stridulus <i>Laryngitis.</i> (See 68, 84.)	Laryngitis - - -	Laryngismus Stridulus	Laryngismus Stridulus.

Reference Number.	Name of Disease.	Heading to which referred in Old Classification.		Heading to which referred in New Classification.
		In Shorter List.	In Extended List and in Supplementary Table.	
69	Leucocythæmia - <i>Liver, Disease of.</i> (See 25, 43, 57, 67.)	Dropsy - - -	Anæmia and Leucocythæmia.	Anæmia, Chlorosis, Leucocythæmia.
70	Lumbar Abscess -	Scrofula - - -	Psoas and Lumbar Abscess.	Caries, Necrosis.
71	Lungs, Congestion of -	Lung Disease, &c. -	Congestion of Lungs -	Other Dis. of Respiratory System.
72	Lupus - - -	Cancer - - -	Lupus - - -	Lupus.
73	Lymphadenoma - <i>Lymphatics, Disease of.</i> (See 4, 73.) <i>Malignant Pustule.</i> (See 129.) <i>Measles.</i> (See 123.)	Scrofula - - -	Adenitis - - -	Dis. of Lymphatic System.
74	Melæna - - -	Stomach Disease, &c. -	Melæna - - -	Melæna.
75	Melancholy - - -	Insanity - - -	Melancholia - - -	Insanity, General Paralysis of the Insane.
76	Melænosia - - -	Cancer - - -	Melænosia - - -	Cancer.
77	Menorrhagia - - - <i>Menstruation, Disorders of.</i> (See 24, 77, 93.)	Paramenia - - -	Menorrhagia - - -	Disorders of Menstruation.
78	Miscarriage - - - <i>Mortification.</i> (See 9, 44, 99.)	Childbirth - - -	Miscarriage - - -	Abortion, Miscarriage.
79	Mumps - - -	Other Zymotic Diseases	Mumps - - -	Mumps.
80	Myelitis - - -	Cephalitis - - -	Myelitis - - -	Paraplegia, Dis. of Spinal Cord.
81	Necrencephalus - <i>Necrosis.</i> (See 70, 110.)	Brain Disease, &c. -	Necrencephalus -	Softening of Brain.
82	Neuralgia - - -	Brain Disease, &c. -	Neuralgia - - -	Other Dis. of Nervous System.
83	Noma Pudendi -	Cancrum Oris (Noma)	Cancrum Oris (Noma)	Dis. of Uterus and Vagina.
84	Œdema Glottidis -	Laryngitis - - -	Œdema Glottidis -	Other Dis. of Larynx and Trachea.
85	Œsophagitis - - -	Enteritis - - -	Œsophagitis - - -	Sore-throat, Quinsy.
86	Œsophagus, Stricture of. <i>Ophthalmia.</i> (See 38.)	Stricture of Intestines	Stricture of Intestines	Other Dis. of Digestive System.
87	Orchitis - - -	Uterus Disease, &c. -	Orchitis - - -	Dis. of Testes, Penis, Scrotum, &c.
88	Otitis - - -	Brain Disease, &c. -	Otitis and Otorrhœa -	Otitis, Otorrhœa.
89	Otorrhœa - - -	Brain Disease, &c. -	Otitis and Otorrhœa -	Otitis, Otorrhœa.
90	Ovarian Dropsy -	Ovarian Dropsy -	Ovarian Dropsy -	Ovarian Disease.
91	Ovariectomy - - -	Uterus Disease, &c. -	Ovariectomy - - -	Ovarian Disease.
92	Pancreas Disease - <i>Paralysis.</i> (See 46, 56, 94, 127.)	Pancreas Disease, &c. -	Pancreas Disease	Other Dis. of Digestive System.

Reference Number.	Name of Disease.	Heading to which referred in Old Classification.		Heading to which referred in New Classification.
		In Shorter List.	In Extended List and in Supplementary Table.	
93	Paramenia (See also 24, 77.)	Paramenia	Paramenia	Disorders of Menstruation.
94	Paraplegia (See also 80.)	Paralysis	Paralysis	Paraplegia, Dis. of Spinal Cord.
95	Pelvic Abscess	Uterus Disease, &c.	Pelvic Abscess	Pelvic Abscess.
96	Pelvis, Deformed	Childbirth	Deformed Pelvis	Other Accidents of Childbirth.
97	Pemphigus <i>Pericarditis.</i> (See 20, 34.)	Skin Disease, &c.	Pemphigus	Pemphigus.
98	Perineal Abscess	Uterus Disease, &c.	Disease or Abscess of Perineum.	Perineal Abscess.
99	Phagedæna	Mortification	Mortification	Phagedæna.
100	Pharyngitis	Enteritis	Pharyngitis	Sore-throat, Quinsy.
101	Phlebitis	Heart Disease, &c.	Phlebitis	Phlebitis.
102	Phlegmasia Dolens <i>Phlegmon.</i> (See 114, 123, 142.) <i>Phthisis.</i> (See 52, 106.)	Childbirth	Phlegmasia Dolens	Phlegmasia Dolens.
103	Piles	Heart Disease, &c.	Piles	Varicose Veins.
104	Placenta Prævia	Childbirth	Placenta Prævia	Placenta Prævia, Flooding.
105	Placenta, Retention of	Childbirth	Retention of Placenta	Other Accidents of Childbirth.
106	Pneumothorax	Phthisis	Pneumothorax	Phthisis.
107	Polypus	Cancer	Polypus	Tumour (if localised, classed to organ affected).
108	Porrigo	Worms, &c.	Porrigo	Other Dis. from Vegetable Parasites.
109	Prostate Gland, Dis. of	Kidney Disease, &c.	Disease of the Prostate Gland.	Dis. of Bladder and of Prostate.
110	Psoas Abscess	Scrofula	Psoas and Lumbar Abscess.	Caries, Necrosis.
111	Puerperal Convulsions	Childbirth	Puerperal Convulsions	Puerperal Convulsions.
112	Puerperal Mania	Childbirth	Puerperal Mania	Puerperal Mania.
113	Pulmonary Apoplexy <i>Purpura.</i> (See 17, 122, 123.)	Lung Disease, &c.	Pulmonary Apoplexy	Other Dis. of Respiratory System.
114	Pyæmia	Phlegmon	Pyæmia	Pyæmia, Septicæmia.
115	Pyrosis <i>Quinsy.</i> (See 85, 100.)	Stomach Disease, &c.	Pyrosis	Dyspepsia.
116	Relapsing Fever	Simple Continued Fever	Relapsing Fever	Relapsing Fever.
117	Remittent Fever (Infantile and under 5).	Enteric or Typhoid Fever.	Enteric or Typhoid Fever.	Remittent Fever.
118	Rheumatic Arthritis	Rheumatism	Rheumatism	Other Constitutional Diseases.
119	Rheumatic Fever	Rheumatism	Rheumatism of Heart or Pericardium.	Rheumatic Fever, Rheumatism of Heart.

Reference Number.	Name of Disease.	Heading to which referred in Old Classification.		Heading to which referred in New Classification.
		In Shorter List.	In Extended List and in Supplementary Table.	
120	Rheumatic Gout <i>Rheumatism.</i> (See 118, 119, 121.)	Gout - - -	Gout - - -	Other Constitutional Diseases.
121	Rheumatism of Heart	Rheumatism - -	Rheumatism of Heart or Pericardium.	Rheumatic Fever, Rheumatism of Heart.
122	Rickets - - -	Purpura and Scurvy -	Rickets - - -	Rickets.
123	Rötheln - - -	Measles - - -	Measles - - -	Epidemic Rose Rash.
124	Scabies - - - <i>Scrofula.</i> (See 4, 70, 73, 110.)	Worms, &c. - -	Scabies - - -	Other Dis. from Animal Parasites.
125	Scurvy - - -	Purpura and Scurvy -	Purpura and Scurvy -	Scurvy.
126	Septicæmia - -	Phlegmon - - -	Pyæmia - - -	Pyæmia, Septicæmia.
127	Shaking Palsy - <i>Simple Continued Fever.</i> (See 15, 116.)	Paralysis - - -	Shaking Palsy - -	Paralysis Agitans.
128	Spinal Marrow Disease	Brain Disease, &c. -	Spinal Marrow Disease	Paraplegia, Dis. of Spinal Cord.
129	Splenic Fever - -	Other Zymotic Diseases	{ Malignant Pustule. Charbon. Woolsorter's Disease. }	Splenic Fever.
130	Stomach, Ulcer of -	Ulceration of Intestines	Ulceration of Intestines	Dis. of Stomach.
131	Stomatitis - - - (See also 19, 47.)	Enteritis - - -	Stomatitis - - -	Stomatitis.
132	Sweep's Cancer - -	Cancer - - -	Sweep's Cancer - -	Cancer.
133	Syncope - - - <i>Tubes Mesenterica.</i> (See 136.)	Heart Disease, &c. -	Syncope - - -	Syncope.
134	Tape Worms - - -	Worms, &c. - - -	Tape Worms - - -	Other Dis. from Animal Parasites.
135	Thrombosis - - - <i>Tubercular Meningitis.</i> (See 60.)	Heart Disease, &c. -	Embolism and Thrombosis.	Embolism, Thrombosis.
136	Tubercular Peritonitis	Tabes Mesenterica -	Tubercular Peritonitis	Tabes Mesenterica.
137	"Tumour" - - - (See also 39, 107.) <i>Typhus.</i> (See 21.) <i>Ulcer.</i> (See 9.)	Causes ill-defined, or not specified.	Abscess, Tumour -	Tumour.
138	Uræmia - - -	Kidney Disease, &c. -	Uræmia - - -	Uræmia.
139	Uterus, Rupture of - <i>Vaccination, Effects of.</i> (See 27, 36.)	Childbirth - - -	Rupture of Uterus -	Other Accidents of Childbirth.
140	Valvular Disease - -	Heart Disease, &c. -	Heart Disease (undistinguished).	Endocarditis, Valvular Disease.
141	Varicose Veins - - (See also 103.)	Heart Disease, &c. -	Varicose Veins - -	Varicose Veins.
142	Whitlow - - - <i>Woolsorter's Disease.</i> (See 129.)	Phlegmon - - -	Whitlow - - -	Abscess.

REMARKS ON THE METEOROLOGY OF THE YEAR 1881.

By JAMES GLAISHER, Esq., F.R.S., &c.

THE most remarkable occurrences during the year were the frequent falls of snow during the first three months of the year, particularly the unusual fall on January 18th, and in December; the low readings of the thermometer in January, being at or below zero at several stations and the high readings of the thermometer in July being above 90° at many places.

The following remarks with regard to excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from observations made about London, but they may be taken as applying generally.

Atmospheric pressure.—The readings of the barometer in the first 10 days of the year were above their average values; the mean daily excess was 0.40 in.; from January 11th to April 6th they were mostly below their average; within this period there were 24 days on which the average was reached, or exceeded, and 61 days on which it was not reached; the average deficiency of mean daily pressure for the 85 days ending April 6th was 0.17 in.; from April 7th to June 22nd the pressure was alternately above and below for a few days together, usually 4 or 5, those above being more numerous; the mean daily excess of pressure for the 77 days ending June 22nd was 0.06 in.; from June 23rd to July 18th, with the exception of 3 days, the readings were above their average, the mean daily excess being 0.12 in.; from July 19th to August 7th the readings were alternately above and below; from August 8th to September 12th the average daily deficiency was 0.19 in.; from September 13th to 16th the pressure was in excess and then in defect till September 22nd; from September 23rd to October 8th the average daily excess was 0.32 in.; from October 9th to November 4th the pressure was for 5 or 6 days together, a little above, and then for 5 or 6 days a little below, the average; for the 20 days ending November 24th, the pressure was in excess to the average of 0.16 daily; this was followed by 4 days of low readings, the average deficiency being 0.49 in.; then by 8 days of excess, when the average was 0.22 in.; from December 7th to 15th, the readings were alternately above and below their averages; the readings in the week ending December 22nd were all low, the average deficiency being 0.46 daily, and in the week following they were all high, the average excess being 0.41 in. and the readings on December 30th and December 31st, were below their averages.

The highest reading in the year at the height of 150 feet was 30.486 inches on May 10th, and the lowest 28.710 inches on January 29th; thus giving a range of 1.776 inches.

Temperature.—Till the 6th day of January the weather was mild; on the 8th a very cold period set in and continued to the 27th, the average daily deficiency of mean temperature for these 20 days was $9^{\circ}.7$; on several days the deficiency exceeded 14° and 15° , and on two days, the 20th and 21st, it was more than $16\frac{1}{2}^{\circ}$; the minimum temperatures at several stations are shown in the following Table:

TABLE showing the MINIMUM TEMPERATURE of the AIR at the several Stations on January 12th
to January 28th.

Names of Stations.		JANUARY, 1881.

From this table we see that the lowest temperature on the 12th was $12^{\circ} \cdot 5$ at Carlisle and Stockton; on the 13th, $11^{\circ} \cdot 5$ at Marlborough; on the 14th, $4^{\circ} \cdot 0$ at Carlisle; on the 15th, $0^{\circ} \cdot 5$ at Carlisle; on the 16th, $-5^{\circ} \cdot 5$ at Carlisle; on the 17th, $-2^{\circ} \cdot 0$ at Carlisle; on the 18th, $5^{\circ} \cdot 6$ at Carlisle; on the 19th, $13^{\circ} \cdot 3$ at Stonyhurst; on the 20th, 3° at Stockton; on the 21st, -2° at Cambridge; on the 22nd, $1^{\circ} \cdot 0$ at Cardington; on the 23rd, $8^{\circ} \cdot 8$ at Totnes; on the 24th, $4^{\circ} \cdot 2$ at Carlisle; on the 25th, $7^{\circ} \cdot 3$ at Wrotesley; on the 26th, $2^{\circ} \cdot 2$ at Carlisle; on the 27th, $7^{\circ} \cdot 2$ at Carlisle; and on the 28th, 25° at Bywell, $29^{\circ} \cdot 1$ at Bradford, but on this day the reading was above 30° at every other station. An examination of the table line by line shows the lowest temperature at each station; at Guernsey the lowest was $24^{\circ} \cdot 5$ on the 16th; at Truro it was 12° on the 15th, and there were several readings below 20° ; the lowest at Eastbourne was $12^{\circ} \cdot 8$, at Plymouth 17° , at Totnes $8^{\circ} \cdot 8$, at Torquay $15^{\circ} \cdot 3$, at Ventnor $14^{\circ} \cdot 6$, at Osborne 12° , at Bournemouth $12^{\circ} \cdot 1$, at Brighton $11^{\circ} \cdot 4$, at Salisbury $2^{\circ} \cdot 5$, at Barnstaple 8° , at Bath $8^{\circ} \cdot 8$, at Ramsgate 15° , at Strathfield Turgiss $3^{\circ} \cdot 9$, at Marlborough $6^{\circ} \cdot 9$, at Bristol 9° , at Whitechurch $5^{\circ} \cdot 3$. All these stations are south of London, and the low temperatures recorded at them are therefore remarkable.

This very cold period was followed by a fortnight of moderately warm weather, whose average daily excess was $3^{\circ}\cdot4$; this was succeeded by a cold period of 21 days duration, the average daily deficiency being $3^{\circ}\cdot6$; then a warm period of 17 days, during which the excess of daily tem-

perature was sometimes as much as 9° , 10° , or 11° , and the average excess was 6° ; from March 21st to April 9th was cold, the average daily deficiency being $3^{\circ}8$; from April 10th to 18th it was warm, the average daily excess being $4^{\circ}7$; from April 19th to May 22nd, with the exception of a few days, was cold, the average daily deficiency of these 34 days was $1^{\circ}6$; a fortnight of warm weather followed extending to June 4th whose average daily excess was $5^{\circ}3$; this was followed by 10 days whose average daily deficiency of temperature was of the same amount, viz., $5^{\circ}3$; 4 days of moderately warm weather followed, and this was succeeded by 12 days of rather cold weather; from July 1st to 5th the weather was warm, the mean daily excess of temperature was $8^{\circ}8$. The 5th of July was a hot day, a thunderstorm occurred, and on July 6th at many stations the maxima shade temperatures were 20° , 30° , and 35° lower than those of the preceding day, and from the 6th to the 9th the weather was cold; then for 11 days the weather was hot; on the 15th the excess of mean temperature was $12^{\circ}7$, and, on this day, temperatures exceeding 90° were recorded at many stations; the average daily excess of mean temperature of these 11 days was $6^{\circ}6$.

The following Table shows the maximum temperatures at the several stations, during the periods of high temperature in July.

TABLE showing the MAXIMUM TEMPERATURES at the several Stations on July 1st to 5th, and from July 11th to 19th.

On looking over this table it will be seen how very great the difference of maximum daily temperatures has been at the different places; on the 1st the temperature exceeded 80° at several stations between Blackheath and Norwich, the highest being $87^{\circ}\cdot6$ at Cardington; whilst at Liverpool the temperature only reached $62^{\circ}\cdot7$, and at Llandudno $63^{\circ}\cdot7$; on the 2nd the extremes were at Eastbourne and Salisbury 80° and $80^{\circ}\cdot5$ respectively, whilst at Bradford and Llandudno 60° and $60^{\circ}\cdot7$ were the highest respectively; on the 3rd there were many places between Salisbury and Leeds, with readings of 80° or more, the highest was $84^{\circ}\cdot7$ at Greenwich; whilst at Lancaster the highest reading was 63° , and at Bristol $66^{\circ}\cdot3$; on the 4th there were several stations between Truro and Leeds with readings exceeding 80° ; the highest was $90^{\circ}\cdot3$ at Nottingham, whilst at Lancaster the highest reading was 62° , and at Carlisle $66^{\circ}\cdot3$. On the 5th, temperatures exceeding 90° took place at many stations between Salisbury and Nottingham, the highest being $93^{\circ}\cdot5$ at Salisbury; on this day the maximum temperature at Bermerside was 61° , at Truro 64° , and at Torquay $68^{\circ}\cdot6$. On the 11th the extremes were 86° at Sunderland, and 56° at Liverpool; on the 12th, temperatures exceeding 80° were recorded at several stations between Osborne and Nottingham, the highest was $86^{\circ}\cdot2$ at Greenwich; whilst at Liverpool the highest was 59° , and at Lancaster 66° . On the 13th the extremes were $83^{\circ}\cdot9$ at Whitchurch, and 60° at Bermerside; on the 14th the temperature exceeded 80° at many places, and was $91^{\circ}\cdot3$ at Whitchurch, and 91° at Sunderland, whilst at Lancaster it was 63° , and at Torquay $67^{\circ}\cdot7$. The most remarkable day was the 15th, when the highest temperature was $97^{\circ}\cdot1$ at Greenwich; the next in order $95^{\circ}\cdot6$ at Osborne; $94^{\circ}\cdot6$ at Camden Square, and 94° at Blackheath; at several other stations above 90° , and at many between 80° and 90° . On this day at Bermerside the highest temperature was 64° , and at Liverpool and Lancaster 66° . These high temperatures are in great contrast to the minimum temperatures in January. This warm period was followed by a cold one extending from July 21st to September 16th, with the exception of the few days between August 4th and 8th, the average daily deficiency of mean temperature for these 58 days was $3^{\circ}\cdot2$; from September 17th to September 26th, was moderately warm, this was succeeded by 38 days extending to November 3rd of cold weather, the average daily deficiency was $4^{\circ}\cdot6$; from November 4th to December 7th, was warm, the mean daily excess being as large as $5^{\circ}\cdot4$; the weather was cold between December 8th and 22nd, the average daily deficiency being $2^{\circ}\cdot6$, and from December 26th to the end of the year the weather was warm.

Rainfall.—The fall of rain about London in January was $1^{\circ}\cdot16$ in., being $0^{\circ}\cdot75$ in. below its average; in February it was $2^{\circ}\cdot43$ ins., being $0^{\circ}\cdot87$ in. higher than its average; in March was $1^{\circ}\cdot84$ in., being $0^{\circ}\cdot29$ in. higher than its average. The fall in April was $0^{\circ}\cdot62$ in., in May was $1^{\circ}\cdot62$ in., in June was $1^{\circ}\cdot86$ in., being respectively $1^{\circ}\cdot14$ in., $0^{\circ}\cdot46$ in., and $0^{\circ}\cdot14$ in. below their averages. In July the fall of rain was $2^{\circ}\cdot13$ ins., being $0^{\circ}\cdot44$ in. below its average; in August was $3^{\circ}\cdot88$ ins., being $1^{\circ}\cdot45$ in. above its average. The fall in September was $2^{\circ}\cdot18$ ins., in October was $2^{\circ}\cdot70$ ins., and in November $2^{\circ}\cdot27$ ins., being $0^{\circ}\cdot24$ in., $0^{\circ}\cdot11$ in. and $0^{\circ}\cdot07$ in. below their averages respectively, and in December was $2^{\circ}\cdot55$ ins., being $0^{\circ}\cdot56$ in. above its average. The total fall during the year was $25^{\circ}\cdot2$ ins. The total falls of rain ranged from $58^{\circ}\cdot32$ ins. at Bolton, $49^{\circ}\cdot87$ ins. at Stonyhurst, $49^{\circ}\cdot66$ ins. at Totnes, to $23^{\circ}\cdot09$ ins. at Gloucester, $23^{\circ}\cdot98$ ins. at Oxford, and $24^{\circ}\cdot02$ ins. at Royston. The greatest number of rainy days in the year were 223 at Bolton, 222 at Bradford, and 215 at Nottingham; and the least were 120 at Gloucester, 134 at Osborne, and 149 at Strathfield Turgiss.

Thunderstorms occurred on 48 days during the year, of these 9 were in June, 8 in August, 7 in both May and July, 4 both in September and

November, 3 in April, 3 in December, 2 in February, one in January, and there were none in either March or October. The storms of May, July, August, September, and November were general over the country, those in February, April, and December were mostly in the Midland and Southern counties. The storm in January at North Shields was very severe.

Thunder was heard but lightning was not seen on 57 days during the year, 40 days being in the months of May, June, July, and August. The greatest number of days in one month was 12 in June, and the least was one in March. Thunder was not heard at any place in January, October, or December.

Lightning was seen but thunder was not heard on 35 days during the year, none of which were in either January, February, March, or April; the greatest number of days in one month was 9, in July.

Solar halos were seen on 46 days during the year. On 8 in both September and November, 6 in August, 5 in both July and October, 4 in February and March and December, and 2 in January, and none in April, May, or June, and when seen at one place were generally seen at all parts of the country.

Lunar halos were seen on 47 nights in the year. On 8 in November, 7 in March, 6 in April, 5 in both February and December, 4 in January, 3 in July, September, and October, 2 in May, one in August, and none in June, and were generally visible over the country at the same time.

Aurora boreales were seen on 8 days during the year, on the 31st all over the country in January; on the 19th and 20th of March at Carlisle; on the 20th of April at Cambridge, Bermerside, and Stonyhurst; on the 21st and 22nd of October at Carlisle; on the 23rd of November at Cardington; and on the 15th of December at Blackheath.

Snow fell on 79 days during the year, 19 in March, 18 in January, 16 in February, 13 in December, 5 in October, 4 in both April and November. The falls in January, February, March, April, November, and December were general all over the country, those in October were mostly confined to the Midland and Northern districts. The day in spring on which the last snow fell was April 21st, and the first day it fell in the following autumn was October 15th at Wolverhampton. The snowstorm of the 18th day of January was very remarkable; this day was bitterly cold and there was a gale from the east, with driving snow that penetrated everywhere. The snow began to fall about 9.0 a.m. and at midnight, at Blackheath, in places free from drift, it was 15 inches in depth; nearly all the lines of railway out of London were blocked, and some of them early in the afternoon; trains were embedded in the snow all night and during the next day. This snowstorm extended southward to Jersey and Guernsey, where the depth was from 12 ins. to 14 ins., with drifts up to four and five feet. In the Isle of Wight the depth was about 15 ins., and Mr. Mann says the island was white with snow from the 17th to the 29th; a second heavy fall of 18 ins. having taken place on the 20th; the total depth of snow which fell on these two days was therefore 33 ins. On the 18th day the depth of snow at Brighton was 18 ins.; in Cornwall and Devonshire it was from 12 to 14 ins., with drifts of from 10 to 12 feet; the amounts were less proceeding northwards, at Cambridge the depth was 8 ins., and at Leeds and Bradford, the fall was very small. The loss of life in England due to the snow was great, and small birds died in great numbers, their food being covered by the snow. Dr. Compton, of South Bourne, says, "Rooks were seen to kill and eat sparrows, and blackbirds to each eat other on my lawn, where a great congregation of birds were collected."

Hail fell on 84 days during the year ; on 13 in October, 12 in both February and in March, 10 in April, 8 in December, 7 in January, 6 in May and October, 5 in June, 2 in August and September, and one in July.

Fog prevailed on 171 different days during the year (exceeding the number recorded in 1875 by 21 days), and they were distributed as follows ; January 28, February 22, March 16, April 8, May 13, June 11, July 6, August 6, September 14, October 13, November 16, and December 18.

Throughout the year fog was frequent over the country in May, June, and July ; it was mostly prevalent in the southern counties.

PRELIMINARY TABLES.
(1881.)

TABLE 1.—Population, Marriages, Births, and Deaths registered in England, in the Forty-four Years 1838-81.

YEARS.	Estimated POPULATION in ENGLAND in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.

1880	25,706,666	191,965	383,930	881,643	528,624	353,019
1881	26,053,406	197,290	394,580	883,642	491,935	391,707

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated upon the numbers enumerated at the Censuses taken in 1841-51-61-71-81. For the estimated numbers of the males and females in each year, and population estimates for years prior to 1838, see Table 73.

TABLE 2.—Proportions of Persons Married, Births, and Deaths to 1000 of the Population of England, in the Forty-four Years 1838-81.

NOTE.—In some cases of marriages between Protestants and Roman Catholics the couples are married twice, and are counted twice in the Registers; such cases are, however, so few, that this source of error may be practically disregarded.

TABLE 3.—Proportion per Cent. of Marriages in England, in the Forty-one Years 1841-81, solemnised according to, and not according to, the Rites of the Established Church; also of Civil Marriages in Superintendent Registrar's Office.

YEARS.		TOTAL MARRIAGES.	ACCORDING TO THE RITES OF THE ESTABLISHED CHURCH.					NOT ACCORDING TO THE RITES OF THE ESTABLISHED CHURCH.			
			License, including Special License.	BANDS.	Superintendent Reg- istrar's Certificate.	Not stated.	TOTAL IN ESTA- BLISHED CHURCH.	TOTAL NOT IN ESTA- BLISHED CHURCH.	Roman Catholics.	Other Religious De- nominations, in- cluding Jews and Quakers.	Superintendent Re- gistrar's Office.

NOTE.—In some cases of marriages between Protestants and Roman Catholics the couples are married twice, and are counted twice in the Registers; such cases are, however, so few, that this source of error may be practically disregarded. Marriages of divorced men and women are classified in this Table as marriages of bachelors and spinners.

TABLE 7.—Marriages in England, and Annual Rate of Persons Married per 1000 living, in each Quarter of the Forty-four Years 1838-81.

Mean Annual Rate per 1000 in each quarter of the 44 years -					12'6	16'7	15'8	19'4

Note.—The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For this inequality a correction has been made in the above calculations.

TABLE 8.—Marriages in England. The Proportion per Cent. of **Minors** of each Sex, of Males and of Females who **signed the Marriage Register with Marks**, and of Persons who were **Widowers or Widows**, in the Forty-one Years 1841-81.

* The mean annual prices of coal are derived from a Parliamentary Return (225 of 1881) furnished by the Registrar of the London Coal Market, by order of the House of Commons. The mean quarterly prices were supplied from time to time to the Registrar-General by Mr. Richard Meade, of the Mining Record Office.

1881 - - -	1,806	1,248	146	396	29

NOTE.—The number of Deaths in the cols. 3 to 6 are estimated on the assumption that the soldiers abroad belonged to the different parts of the British Empire in the proportions indicated in Table 61; previously to 1861 the proportions used are those existing in 1851, the proportions which prevailed in 1861 being used for the 10 years 1861-70, the proportions at the Census in 1871 for the 10 years 1871-80, and those prevailing at the Census in 1881 for that year.

TABLE 63.—Births and Deaths among Passengers, British Subjects, on board Merchant Vessels at Sea, including Soldiers, Marines, and invalided Seamen from the Royal Navy, in the Twenty-six Years 1856-1881, reported by the Captains or Commanding Officers of Vessels to the Registrar General of Shipping and Seamen at the Termination of their respective Voyages in Ports of the United Kingdom.

(Furnished to the Registrar General by the Registrar General of Shipping and Seamen.)

In the 30 years 1852–81	5,620,065	120,044	21·4

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a seaman die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a passenger die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE 65.—RETURN of the AGES and CAUSES of DEATH of 4,464 Seamen reported to the BOARD OF TRADE in 1881 as having died in the **British Merchant Service**. (*Parliamentary Return, Session of 1882.*)

TABLE 67.—Changes in the Constitution of the Registration Districts and Sub-districts during the Year 1881.

[N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.

(2.) The Populations quoted are the Numbers enumerated at the Census of 1881.

No. of District.	NAME OF DISTRICT.	Date of Change.	Nature of Change.
28	LEWISHAM - - -	10 June -	The sub-district of <i>Lewisham Village</i> was re-named <i>Lewisham</i> .
32	GUILDFORD - - -	1 July -	The parish of Merrow (population 595) was transferred from the sub-district of <i>Albury</i> to that of <i>Guildford</i> .
110	ANDOVER - - -	1 January -	The sub-district of <i>Ludgershall</i> was re-named <i>Amport</i> .
209	HARTISMERE - - -	1 October -	The sub-district of <i>Eye</i> was abolished. The parishes of Braiseworth, Eye, Oocold, Reddingfield, Stoke Ash, and Thorndon All Saints (aggregate population 4113), were added to <i>Mendlesham</i> sub-district, and the remainder, consisting of the parishes of Broms, Oakley, Stuston, Thornham Magna, Thornham Parva, Thrandestone and Yaxley (aggregate population 1799) to <i>Botesdale</i> sub-district.
237	KING'S LYNN - - -	1 February -	The sub-districts of <i>King's Lynn North</i> and <i>King's Lynn Middle</i> were united under the name of <i>King's Lynn North</i> sub-district (population 11,629).
"	" - - -	1 October -	The sub-districts of <i>King's Lynn South</i> and <i>King's Lynn North</i> were united under the name of <i>King's Lynn</i> sub-district (population 19,206).
440	NANTWICH - - -	14 July -	The sub-district of <i>Wybunbury</i> was re-named <i>Cresce</i> .
454	TOXTETH PARK - - -	1 January -	For the constitution of this new Superintendent Registrar's District, <i>see</i> WEST DERBY (455).
455	WEST DERBY - - -	" -	The sub-district of <i>Toxteth Park</i> (population 117,028) was separated from WEST DERBY and created a Superintendent Registrar's District named TOXTETH PARK (454).
496	MANCHESTER - - -	1 December	The sub-districts of <i>Deansgate</i> and <i>Market Street</i> were united under the name of <i>Central</i> sub-district (population 41,833).
505	BERWICK - - -	1 November	The sub-districts of <i>Norhamshire</i> and <i>Islandshire</i> were united under the name of <i>Norhamshire and Islandshire</i> sub-district (population 6440).

Under the provisions of "The Divided Parishes and Poor Law Amendment Act, 1876," small changes have been made in the constitution of the following Districts:—MIDHURST (85), HOWDEX (518), KENDAL (579), GOWER (893); and interchanges between the following pairs of Districts:—GUILDFORD (32) and FARNHAM (23), GUILDFORD (32) and HAMBLEDON (34), PETWORTH (80) and MIDHURST (85), MARKET DRAYTON (256) and NEWPORT (358), BURTON-ON-TRENT (367) and ASHBY-DI-LA-ZOUCH (406), MERIDEN (538) and ATHERSTONE (389), ATHERSTONE (389) and MARKET BOSWORTH (405), BOSTON (417) and HORNCASTLE (421), BOSTON (417) and SPILSBY (422), and HORNCASTLE (421) and SPILSBY (422).

1880	—	—	—	—	—	—	—	—
1881	—	—	—	—	—	—	—	—

NOTE.—The population in the four years 1862-65 and in the years 1867-69 was estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years.

† Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

TABLE 87.—SPAIN. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1861 to 1870.

YEARS.	NUMBERS.					PROPORTION PER 1000 OF THE POPULATION.		
	ESTIMATED POPULATION.	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.	PERSONS MARRIED.	BIRTHS.	DEATHS.
1861	15,879,863	130,731	261,463	634,096	417,764	16.5	39.8	26.3
1862	16,066,124	126,696	253,392	615,919	430,463	16.0	38.3	26.8
1863	16,310,863	124,176	248,353	606,800	461,861	15.8	37.4	28.5
1864	16,340,323	126,308	252,606	629,546	490,198	15.5	38.5	30.6
1865	16,423,793	128,917	257,834	632,030	533,580	15.7	37.9	32.8
1866	16,579,090	131,981	263,963	618,961	463,684	15.9	37.3	28.0
1867*	16,716,151	118,409	236,818	634,313	487,151	14.2	37.3	29.1
1868	16,833,212	111,684	223,368	579,464	548,680	13.3	34.4	32.6
1869	16,863,866	137,120	274,340	603,387	550,660	16.2	35.7	32.6
1870	16,935,613	105,543	211,086	599,786	509,869	12.5	35.4	30.1

NOTE.—The Population enumerated at the Census of 1860 was 15,873,536. The estimated Population for the Years subsequent to 1861 has been deduced from the Excess of Births over Deaths in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* Census year.

* Census years. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for each of the other years the population is estimated to the middle of the year. The population in inter-census years are somewhat over-estimated through no account having been taken of emigration.

NOTE.—The facts for Rome were first included with those for the Kingdom of Italy in 1873.

* Registration or Union Counties consist of groups of Superintendent Registrars' Districts which are generally co-extensive with the unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal District, or the greater part of the population, is located. The boundaries of Registration Counties heretofore differ more or less from the boundaries of Counties (proper).

† The figures were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1881. They do not include land occupied by foreshore or tidal water of rivers and creeks.

No. 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1881.

1 When the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rite of both persuasions; in these cases the two ceremonies are entered as two marriages. Divorced men and women who marry are denoted in these Abstracts as bachelors and spinsters. For particulars of marriages of persons stated to have been previously divorced, see Table G., page 251.

ABSTRACT OF MARRIAGES.—Marriages registered in England, pursuant to the

* The 650 Districts, which are arranged according to their local position, are collections of parishes or places, as far as possible identical with the Poor Law Unions of the same names. They were re-numbered on the 1st January 1881.

† The District of Kensington comprises the two Poor Law Unions of Paddington and Kensington.

* The 630 Districts, which are arranged according to their local position, are collections of Parishes or Places, nearly always identical with the Poor Law Unions of the same names. They were re-numbered on the 1st January 1881.

† 1.—The District of Kensington comprises the two Poor Law Unions of Paddington and Kensington.

NOTE.—For area and population of the Registration Divisions and Counties, see pages 2 and 4.

* The Registration Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

BIRTHS and DEATHS registered in the Year 1881—continued.

* The Superintendent Registrars' Districts (830 in number) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Sub-districts (2171 in number at the end of the year 1881) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; w indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates a Hospital or Infirmary; L a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1881 are given on pages 93-114.

‡ 1. The Registration District of Kensington comprises the two Poor Law Unions of Paddington (St. Mary Paddington and St. John Paddington Sub-districts) and Kensington (Kensington Town and Brompton Sub-districts).

* 449; 1.—On the 14th July the name of this Sub-district was changed from Wyburnby to Crews.

† 450.—The District of Chester comprises the three Poor Law Unions of Tarvin (Tattenhall Sub-district), Chester (Chester Castle and Chester Cathedral Sub-districts), and Hawarden (Hawarden Sub-district).

‡ 454 and 455.—On the 1st January 1881, Toxteth Park, formerly a Sub-district in the District of West Derby, was constituted a superintending Registrar's District.

* 630.—The District of Anglesey comprises the two Poor Law Unions of Anglesey (Llangefni, Llanddud, and Amiweh Sub-districts) and Holyhead (Bryngwran, Llanddud, and Holyhead Sub-districts). The parishes of Bodewryd and Rhosbeirio, however, situated in Llanddud Sub-district belong to the Union of Anglesey, and not to the Union of Holyhead.

SEVENTH EDITION (1871) 20

(1871)

DEATHS IN PUBLIC INSTITUTIONS,

1881.

THE following pages contain the numbers of deaths registered during 1881 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1499 Institutions; of which 722 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 691 Hospitals or Infirmaries; and 86 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1499 Institutions 53,187 deaths were registered during the year, or 10·8 per cent. of the total deaths in England and Wales, against 10·1 and 9·4 per cent. in the two preceding years; 34,502 occurred in Workhouses, 13,822 in Hospitals, and 4,863 in Lunatic Asylums. The proportion to total deaths was 7·0 per cent. in Workhouses, 2·8 in Hospitals, and 1·0 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

Deaths registered in the Public Institutions of England in the Year 1881.

* When a person dies from an operation, which was performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury. The same is done with deaths attributed to Traumatic Tetanus. The figures above refer, therefore, only to those deaths from operation and those deaths from Traumatic Tetanus concerning which no further information was obtained.

Of the above 11,539 ACCIDENTS, 88 are stated to have occurred to Persons in a state of INTOXICATION and 16 to Persons suffering from DELIRIUM TREMENS. And in 288 other cases Death was accelerated by the supervention of Erysipelas, MORTIFICATION, PYÆMIA, or TETANUS. Here follow details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year.		1	2	3	4	Total under 5 Years.	5-	10-	15-	20-	25-	35-	45-	55-	65-	75-

INDEX OF DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report. The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and not under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881.*

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 228) and "Index of certain Towns" (page 238).

A

Aberayron, 604.
Abergavenny, 582.
Aberystwith, 605.

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having compound names in the order indicated by the usual pronunciation of those names; thus, East Griinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.

ALPHABETICAL INDEX

INDEX OF SUBJECTS

INDEX

1. The first part of the index is a list of the subjects which are treated in the work. These are arranged in alphabetical order, and each subject is followed by a number indicating the page on which it is treated. This part of the index is the most important, as it enables the reader to find the page on which any subject is treated. It is also the most complete, as it includes all the subjects which are treated in the work.

2. The second part of the index is a list of the names of the authors of the works which are treated in the work. These are arranged in alphabetical order, and each name is followed by a number indicating the page on which it is treated. This part of the index is also important, as it enables the reader to find the page on which any author's work is treated. It is also the most complete, as it includes all the authors whose works are treated in the work.

3. The third part of the index is a list of the titles of the works which are treated in the work. These are arranged in alphabetical order, and each title is followed by a number indicating the page on which it is treated. This part of the index is also important, as it enables the reader to find the page on which any work's title is treated. It is also the most complete, as it includes all the titles of the works which are treated in the work.

4. The fourth part of the index is a list of the names of the subjects which are treated in the work. These are arranged in alphabetical order, and each name is followed by a number indicating the page on which it is treated. This part of the index is also important, as it enables the reader to find the page on which any subject's name is treated. It is also the most complete, as it includes all the names of the subjects which are treated in the work.

5. The fifth part of the index is a list of the names of the authors of the works which are treated in the work. These are arranged in alphabetical order, and each name is followed by a number indicating the page on which it is treated. This part of the index is also important, as it enables the reader to find the page on which any author's name is treated. It is also the most complete, as it includes all the names of the authors whose works are treated in the work.

6. The sixth part of the index is a list of the titles of the works which are treated in the work. These are arranged in alphabetical order, and each title is followed by a number indicating the page on which it is treated. This part of the index is also important, as it enables the reader to find the page on which any work's title is treated. It is also the most complete, as it includes all the titles of the works which are treated in the work.

7. The seventh part of the index is a list of the names of the subjects which are treated in the work. These are arranged in alphabetical order, and each name is followed by a number indicating the page on which it is treated. This part of the index is also important, as it enables the reader to find the page on which any subject's name is treated. It is also the most complete, as it includes all the names of the subjects which are treated in the work.

8. The eighth part of the index is a list of the names of the authors of the works which are treated in the work. These are arranged in alphabetical order, and each name is followed by a number indicating the page on which it is treated. This part of the index is also important, as it enables the reader to find the page on which any author's name is treated. It is also the most complete, as it includes all the names of the authors whose works are treated in the work.

9. The ninth part of the index is a list of the titles of the works which are treated in the work. These are arranged in alphabetical order, and each title is followed by a number indicating the page on which it is treated. This part of the index is also important, as it enables the reader to find the page on which any work's title is treated. It is also the most complete, as it includes all the titles of the works which are treated in the work.

10. The tenth part of the index is a list of the names of the subjects which are treated in the work. These are arranged in alphabetical order, and each name is followed by a number indicating the page on which it is treated. This part of the index is also important, as it enables the reader to find the page on which any subject's name is treated. It is also the most complete, as it includes all the names of the subjects which are treated in the work.

ALPHABETICAL INDEX

TO

REGISTRAR-GENERAL'S FORTY-THIRD ANNUAL REPORT.

	PAGES
ACCIDENT, deaths from, at various Ages	211-217
AGES; Mean Age at Marriage of Men, Women, Bachelors, Spinsters, Widowers, and Widows	xiv
Minors married in 1881, and the per-centage to total marriages . .	xiv
Septuagenarians married in 1881	xiv
at Death	xvii
Death-rates at successive life-periods, 1876-81. (Table I.) . .	xvii
at Death of Males and Females in each year, 1838-81. (Tables 21, 22.)	lxii-lxiii
Mortality of Males and Females at 12 groups of Ages, 1838-81. (Tables 23-25.)	lxiv-lxvi
of 329,948 Persons married, distinguishing Bachelors, Spinsters, Widowers, and Widows	26-28
at Death of Males and Females registered in Divisions, Counties, and Districts	115-136
at Death of Males and Females from different Causes	137-145
at Death of Males and Females, in London, from different Causes .	146-153
AREA in Acres of the Islands in the British Seas—Man, Jersey, Guernsey, &c. (Table 52.)	xcvii
in Acres and Hectares of the United Kingdom and its parts. (Table 50.)	xcvi
in Acres of each Division, County, and District	2-25
in Acres of each District and Sub-district	32-91
ALPHABETICAL LIST of Diseases affected by the changes of Classification adopted in the present Report	xxix-xxxiv
ARMY; Strength and Mortality of, in 1881	xxvi
Average Strength of, at Home in 1881. (Table 55.)	xcix
Average Strength and Distribution of, in different parts of the United Kingdom and Abroad in each Year, 1861-81. (Table 56.)	xcix
Average Strength, Deaths, and Death-rate in the United Kingdom. (Table 57.)	xcix
Average Strength Abroad in each Year, 1878-81. (Table 58.) .	c
Deaths in, in Great Britain, Ireland, and Abroad in each Year, 1878-81. (Table 59.)	c
Death-rate at Home and Abroad in each Year, 1859-81. (Table 60.)	c
Nationality of, in 1861-71-81. (Table 61.)	ci
Deaths in each Year, 1858-81, and the estimated Proportions belonging to England, Scotland, Ireland, and foreign parts. (Table 62.)	ci

	PAGES
AURORÆ BOREALES in 1881	xxxix
AUSTRIA; Marriage, Birth, and Death-rates in each Year, 1861-81. (Table 74.)	cxvi
Estimated Population; Number, and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853-81. (Table 79.)	cxix
ATMOSPHERIC PRESSURE	xxxv
BELGIUM; Marriage, Birth, and Death-rates in each Year, 1853-81. (Table 74.)	cxvi
Estimated Population; Number and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853-81. (Table 85.)	cxvii
BIRTHS in 1881	xv
Illegitimate	xv
Sex, proportions of	xv
of British Subjects at Sea	xxvi
registered, and excess over Deaths, in each Year, 1838-81. (Table 1.)	xlii
in each Quarter of the Years 1838-81. (Table 12.)	liii
in each Year 1838-81; Legitimate and Illegitimate in 1842 and 1845-81, and Proportion of Males and Females. (Table 13.)	liv
proportion of Illegitimate Children to every 100 Births in Counties in each Year 1871-81, and the mean of 10 Years, 1871-80. (Table 14.)	lv
in Counties, in 1881. Numbers, Sex, Legitimate and Illegitimate; Proportions of Males to Females. (Table 15.)	lvi
proportion of Males and Females born in Counties in each Year, 1871-81, and the mean of 1871-80. (Table 16.)	lvii
in the United Kingdom and its parts. (Table 50.)	xcvi
of British Subjects at Sea in each Year, 1856-81. (Table 63.)	cii
Legitimate and Illegitimate, in Divisions and Counties, distinguishing Males and Females	30-31
in Divisions, Counties, Districts, and Sub-districts, distinguishing the Legitimate and the Illegitimate	30-31
excess over Deaths, in Divisions, Counties, Districts, and Sub-districts	30-31
Illegitimate. (See ILLEGITIMATE BIRTHS.)	
BIRTH-RATE in 1881 very low	xv
Illegitimate, stationary for seven Years	xv

REPORT

TO

The Right Honourable SIR CHARLES DILKE, Bart., M.P.,
President of the Local Government Board, &c. &c.

General Register Office, Somerset House,
31st March, 1884.
(1882.)

SIR,

I HAVE the honour to submit to you the detailed abstracts of the marriages, births, and deaths that were registered in England and Wales during the year 1882, together with a report on the main features of the vital statistics of that year.

Increase of Population.—The numbers of births and deaths registered in the year were 889,014 and 516,654 respectively, so that the natural increment of the population, or excess of births over deaths, was 372,360, or 1·43 per cent. of the estimated population in the middle of the immediately preceding year. In 1881 the natural increment had been considerably higher, amounting to no less than 391,707. The falling off in 1882 was not due to any diminution in the number of births, which were 5372 more than in the previous year, but to an increase in the number of deaths, which, although still much below the average of recent years, was considerably in excess of the number registered in 1881, when the death-rate reached the minimum as yet recorded.

Were the growth of the population since the last Census determined simply by the balance between registered births and deaths, the population of England and Wales in the middle of 1882 would have numbered 26,464,820 persons. But such a method of reckoning leaves out of account the effects of emigration and of immigration, which cannot be measured with any great precision. It would appear, however, from the returns made by the Board of Trade that the loss due to the excess of emigration over immigration since the date of the Census must have been considerable. For both in 1881 and in 1882 the excess of emigrants from the United Kingdom over immigrants into it was of unprecedented magnitude. The excess in 1881, according to the Board of Trade returns, amounted to 315,409, and in 1882 to 335,020 persons, whereas the average annual excess in the five preceding years has been only 115,934. How much of these losses fell respectively to England and Wales, to Scotland, and to Ireland, we have no means of stating with any precision; but that pretty nearly a full share in the increased losses in 1881 and 1882 fell to the population of England and Wales may be inferred with much probability from the fact that of those emigrants who were natives of the United Kingdom 58 per cent. in each of the two years were of English or Welsh origin, the mean proportion in the five preceding years having been 60 per cent., or only slightly higher.

The population, as enumerated in April 1881, numbered 25,974,439 persons; and, on the hypothesis that the rate of increase continued to be the same as it had been in the interval between that date and the previous Census, the population in the middle of 1882 was 26,413,861. Of these 12,853,737 were males and 13,560,124 were females. This is the population on which the rates in this report have been calculated.

MARRIAGES.

The marriages in 1882 numbered 204,405, giving a rate of 15·5 persons married to 1000 persons living. The marriage-rate was at its maximum in 1873, and fell year after year continuously from that date till 1879, when it was at its minimum, viz. 14·4. In 1880 it began to recover from the long depression, and was 14·9; in 1881, it advanced to 15·1, and finally in 1882, a still further rise brought it, as already stated, to 15·5.

Coincidentally with the rise in the marriage-rate, there was in 1882, as almost invariably is the case, an increase in the value of exports from the United Kingdom per head of the total population; there was also, as is not quite so invariably though still most commonly the case, a rise in the value of imports per head of population; and finally there was what, as was shown in my last Annual Report, is not usually a concomitant of a rise in the marriage-rate, a very slight fall in the average Gazette price of British wheat. The fluctuations in these several measures of well-being are shown in the following table. A column has also been added to the Table, giving the fluctuations in another measure of commercial activity, viz., the amount cleared each year at the London Bankers' Clearing House, per head of population. It will be seen that here also there is a very close agreement with the fluctuations in the marriage-rate; in each case the maximum was reached in 1873, and the minimum since that date in 1879.

TABLE A.—MARRIAGE-RATE, BRITISH EXPORTS AND IMPORTS, PRICE OF WHEAT, and amount cleared at the Bankers' Clearing House, in each of the 23 Years 1860-82.*

YEARS.	Marriage-rate.	Value per Head of Population.			Average Price of Wheat per Quarter.	Amount cleared at the Bankers' Clearing House per Head of Population.

1882	15·5	6 16 10	11 14 0	20 7 8	45 0	236

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures in the value columns are derived from the Board of Trade Statistical Abstracts, but have been slightly altered in accordance with later and more accurate estimates of the population. The figures showing the amount cleared at the London Bankers' Clearing House are also derived from the Board of Trade Statistical Abstracts, calculated upon the population of England and Wales.

If the marriage-rates of 1882 are compared with those of 1879, the year of greatest depression, (*see* Table 9), it will be seen that the only counties that apparently did not share in the recovery were Kent (extra-metropolitan), Sussex, Hampshire, Berkshire, Hertfordshire, Oxfordshire, Huntingdonshire, Cambridgeshire, Dorsetshire, Gloucestershire, Herefordshire, and Rutlandshire, together with North Wales, all of which are mainly agricultural. In each of these counties the rate in 1882 was lower, or at any rate not higher, than it had been in 1879. On the other hand the counties which showed the greatest recovery were Durham, Monmouthshire, Staffordshire, Cumberland, Cornwall, the North Riding of Yorkshire, and Nottinghamshire, all of which are mainly of mining or industrial character.

Forms of Marriage.—Of the 204,405 marriages celebrated in 1882, 146,102 or 71·5 per cent. were solemnised according to the rites of the Established Church, and 58,303 or 28·5 per cent. otherwise. The proportions were precisely the same in the immediately preceding year 1881; a fact which is worthy of notice, inasmuch as there had been no similar arrest since 1871 in the almost continuous decline in the proportion of church marriages to marriages of all kinds. The subjoined Table shows what proportion of the marriages in the Established Church were by license, banns, and Superintendent Registrar's Certificate respectively; and it will be noticed that the proportion of marriages by banns, which began to rise in the quinquennium ending with 1865, rose in 1882 to the highest point attained since that period.

TABLE B. — OF THE MARRIAGES CELEBRATED IN THE ESTABLISHED CHURCH, THE PROPORTION PER CENT. BY SPECIAL LICENSE, LICENSE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841-82.

“ 1882 - -	100	·05	9·12	88·42	2·41

* The Church marriages not otherwise described have been proportionally distributed over the headings "Special License," "License," &c.

In 469 of the marriages in 1882 the particulars required for the accurate construction of the above Table were not furnished, owing to the negligence of the officiating clergymen. These cases of neglect were, however, fewer in number than in any previous year.

Of the 58,303 marriages, not according to the rites of the Establishment, 9,235 were solemnised in Roman Catholic places of worship: 70 were

marriages according to Quaker Rites ; 22,768 were solemnised in the chapels of other Christian communities ; 513 were marriages of Jews ; and 25,717 were civil marriages in the offices of Superintendent Registrars.

First Marriages ; Re-marriages. Males.—Of the 204,405 men who married in 1882, 178,849, or 87·5 per cent. were bachelors,* while 25,556, or 12·5 per cent., were widowers.

Of the 178,849 bachelors, 170,720, or 95·5 per cent., married spinsters, while 8129, or 4·5 per cent., married widows.

Of the 25,556 widowers who re-married, 15,616, or 61·1 per cent., married spinsters, while 9940, or 38·9 per cent., married widows.

Females.—Of the 204,405 women who married, 186,336, or 91·2 per cent., were spinsters,* while 18,069, or 8·8 per cent., were widows.

Of the 186,336 spinsters, 170,720, or 91·6 per cent., married bachelors, while 15,616, or 8·4 per cent., married widowers.

Of the 18,069 widows who re-married, 8129, or 45·0 per cent., married bachelors, while 9940, or 55·0 per cent., married widowers.

Divorce.—The number of persons married in the year, who were described as divorced, was 124, and consisted of 69 men and 55 women. Of the 69 men, 53 married spinsters, 14 married widows and 2 married divorced women ; while of the 55 women, 41 married bachelors, 12 married widowers, and 2 married divorced men.

Ages at Marriage.—In 30,236, or 14·8 per cent., of the marriages, the officiating minister or registrar neglected to insert the ages of both parties, or of one or the other of them, in the register. The mean age at marriage of the remaining 174,169 couples, whose ages were duly stated, was 27·9 for the males and 25·6 for the females. The mean age of the bachelors was 25·9 and of the spinsters was 24·4 years ; while the mean ages of the widowers and widows who re-married were respectively 43·3 and 39·8 years. How very slightly the mean ages vary in successive years is seen in the following Table.

TABLE C.—MEAN AGES AT MARRIAGE.

YEAR.	Bachelors.	Widowers.	Bachelors and Widowers.	Spinsters.	Widows.	Spinsters and Widows.
1867	25·8	—	28·0	24·5	—	25·8
1868	25·8	—	27·9	24·4	—	25·7
1869	25·8	—	28·0	24·4	—	25·7
1870	25·8	42·6	27·9	24·4	38·8	25·7
1871	25·8	42·6	27·9	24·4	39·0	25·7
1872	25·7	—	27·9	24·3	—	25·7
1873	25·6	—	27·8	24·2	—	25·6
1874	25·7	43·0	27·9	24·3	39·4	25·7
1875	25·7	43·0	27·9	24·3	39·4	25·8
1876	25·7	43·1	28·0	24·4	39·5	25·8
1877	25·7	43·0	27·9	24·4	39·6	25·8
1878	25·8	43·1	27·9	24·4	39·6	25·8
1879	25·8	43·2	27·9	24·3	39·8	25·6
1880	25·8	43·3	27·9	24·4	39·6	25·7
1881	25·9	43·4	28·0	24·4	39·8	25·7
1882	25·9	43·3	27·9	24·4	39·8	25·6

* The 69 divorced men who re-married in the year are here reckoned as bachelors and the 55 divorced women who re-married are reckoned as spinsters.

Of the women who marry rather more than half, and of the men who marry rather less than one-half, are from 20 to 25 years of age (See Tables on p. 26). The annual chances of marriage are, as might be supposed, much higher for women than for men in the earlier periods of life, and much higher for men than for women in the later periods. This is shown in the following Table, which gives the number of bachelors and spinsters who married annually out of 1000 living of corresponding ages. The figures are given both for 1870-71-72, and for 1880-81-82; and it will be seen that at both periods the annual chances of marriage are considerably higher for women up to the age of 25, but that after that age the chances are higher for men. It will also be noted that the decline in the marriage-rate in 1880-81-82 as compared with 1870-71-72 affected both bachelors and spinsters, and at each stage of life without exception.

TABLE D.—ANNUAL MARRIAGES of BACHELORS and of SPINSTERS per 1000 living at successive age-periods.

Age Periods.	1870-71-72.		1880-81-82.	
	Bachelors.	Spinsters.	Bachelors.	Spinsters.
15	4·7	22·5	4·6	21·8
20	123·5	137·9	106·8	121·7
25	120·4	88·6	112·4	80·4
35	48·6	31·3	40·5	26·3
45	15·5	12·3	14·3	10·4
55	3·3	3·7	3·0	1·6

Marriages of Minors.—The numbers of men and women under 21 years of age who married in 1882 were 15,459 and 45,019 respectively; so that of every 100 men who married 7·56, and of every 100 woman who married 22·02 were minors. The proportion of these premature marriages to all marriages was at its maximum in 1874, both for males and females; from that date the proportion declined continuously year by year till 1881 inclusively, but in 1882 the continuity of the decline was broken and the proportion rose in both sexes. This change would seem to indicate that the increase that occurred in the marriage-rate was greater among the improvident, than in the provident classes.

Signature in Marriage Register.—The proportion of persons who at the time of marriage were unable to sign their names in the register was 15·2 per cent. in 1882, and was smaller than in any previous year. It is, however, to be noted that the progress in this respect has not been so rapid in the last few years as in the immediately preceding periods. In the triennial period, 1874-76, the decline in the proportion of illiterates who married, compared with the preceding three years was 11·2 per cent.; in the succeeding triennium, 1877-79 the decline was 14·9 per cent.,

whereas in the next period, 1880–82, the fall was only 8·5 per cent., and on one occasion during that period, viz., in 1880, there was, as was pointed out in the report for that year, an actual retrogression, for the first time since 1850, and the proportion of illiterates slightly increased. The probable explanation of this apparent retardation in the efforts of education, is, as has been pointed out in previous reports, that in periods of industrial depression, such as the country has been passing through in recent years, the educated and the prudent classes abstain from marriage to a greater extent than do the improvident and the uneducated. At the same time, however, it must be borne in mind that there must eventually come a time when state education will have done all of which it is practically capable; and that, as this time approaches, there must necessarily be a falling off in the rate of progress.

Certified Places of Worship.—There were on 31st December 1882 22,070 places of worship (not belonging to the Established Church), certified under Acts 15 and 16 Vict. c. 36., and 18 and 19 Vict. c. 81. There were 769 new buildings registered during the year, whereas 65 buildings were removed from the register by cancellation; the net increase during the year was therefore 704.

Buildings registered for the Solemnisation of Marriages.—The number of buildings registered for the solemnisation of marriages by other rites than those of the Established Church, standing on the register at the end of 1882, was 9005 (see Table 11), showing an increase of 178 during the year.

BIRTHS.

The births registered in 1882 numbered 889,014, and were in the proportion of 33·7 births per 1000 persons living. This was the lowest birth-rate recorded since 1853, when the rate was only 33·3. The rate was at its maximum point in 1876, when it was 36·4; but from that date fell uninterruptedly, in natural accordance with the fall in the marriage-rate.

The lowest birth-rates were in Huntingdonshire (27·6), Herefordshire (27·7), Rutlandshire (28·0), Cambridgeshire (28·5), Dorsetshire (29·1), North Wales (29·2), and Shropshire (29·3); while the highest were in Leicestershire (34·9), Monmouthshire (34·9), Essex (35·0), North Riding (35·1), Lancashire (36·0), Nottinghamshire (36·9), Staffordshire (37·6), and Durham (39·3). These differences, as has been pointed out in previous reports, are explicable in part by the greater proportion of married women of reproductive ages in the population of mining and manufacturing, as compared with agricultural districts, and in part by the comparative youthfulness of such excess of married women; but it would also appear that, when all allowance has been made for such differences, there is still an excess of fertility in the industrial as compared with the agricultural parts, which may possibly find its explanation in the greater physical vigour of the mining and industrial population, which is constantly being recruited by the immigration of the pick of the rural population.

Sex.—The male births numbered 452,752, and female births numbered 436,262, so that the former were to the latter in the proportion of 103·8 to 100; the mean proportion in the ten preceding years having been 103·9 to 100. (*See Tables 13 and 16.*)

Illegitimate births.—The illegitimate births numbered 43,155, and were in the proportion of 4·9 to every 100 births registered. The proportion had been precisely the same in 1881, but was higher than in any one of the six preceding years. This was not due to any increase in the illegitimate births, but to the diminution in the legitimate births caused by the large decline in the marriage-rate. The illegitimate births were in fact fewer in proportion to the population than in any previous year, being 1·6 to 1000 persons living, a proportion fractionally below that of the seven immediately preceding years, in each of which it was 1·7. (*Table 13.*)

The amount of illegitimacy, as measured by the proportion of illegitimate births to unmarried females of childbearing ages, differs very greatly in different counties. This question was discussed at some length in the Annual Report for 1879, and it was then pointed out that England and Wales could be divided, and not very roughly, into three zones, a southern zone with an illegitimate rate below the general average, a midland zone with illegitimacy somewhat above the average, and a northern zone with an excessively high illegitimate rate. The experience of the three years that have elapsed since that report confirms the conclusions then arrived at, as will be seen by comparing the first column of figures in the following table with the corresponding county figures in the report for 1879 (42nd Annual Report, page xvii.). The order of the counties in the two tables is almost identical.

A very considerable proportion of the illegitimate births, namely 163 per 1000, occur in workhouses; whereas the proportion of legitimate births that occur in those institutions is no more than 2·1 per 1000. The extent, however, to which the workhouse is resorted to by unmarried women for their confinements varies very much in different counties, and it is curious to note that, as is shown in the second column of figures in the following table, the proportion of illegitimate births that occur in workhouses is on the whole, and speaking generally, highest in those counties in which the illegitimate birth-rate is lowest; and, vice versâ, is lowest where illegitimacy is most common. It may be suggested as a not improbable explanation of this inverse relation between the figures in the two columns one and two of the table, that the counties in which there is most illegitimacy are counties where there is much systematic domestic concubinage, in which the mother of the illegitimate children enjoys the state of mistress of the house, and remains there for her confinements; whereas the counties in which there is comparatively little illegitimacy are counties in which systematic concubinage is not common, such illegitimate births as occur being rather the results of stray licentiousness; in which case the mother has no house of which she is mistress, and is consequently forced in her need to take refuge in the workhouse.

TABLE E.—ANNUAL RATE OF ILLEGITIMATE BIRTHS per 1000 UNMARRIED WOMEN, aged 15–45 years, in the three years 1880–81–82; and the PROPORTION per 1000 of ILLEGITIMATE BIRTHS registered in WORKHOUSES in 1882.

DEATHS.

The deaths registered in 1882 numbered 516,654, and were in the proportion of 19·6 to 1000 persons living. In 1881 the proportion was 18·9, but with this single exception the death-rate in 1882 was the lowest as yet recorded. The annual death-rate in the decade 1871-80 was 21·39, and had the rate in 1882 remained at the same point there would have been 48,338 additional deaths in the course of the year. Some part, it is true, of this diminished mortality must be ascribed to the change in the age-distribution of the population, the proportion of aged persons, among whom the death-rate is always high, having diminished of late years. For this change, however, it is easy to make allowance, by calculating the number of deaths that would have occurred, had the conditions of health remained as in the previous decade, from the death-rates at each successive age-period, and not from the general death-rate. The general death-rate, then, in England and Wales, with the altered age-distribution, would have been 21·18, had the death ratio at each successive age-period remained as in 1871-80, and the total deaths would have been 559,532 instead of 516,654. Thus of the apparent saving of 48,338 lives only 42,878 lives were really saved, while the remaining decrease of 5460 deaths was only apparent, being in reality due to the altered age-distribution of the population.

Ages.—The fluctuations in the general death-rate, that is to say, in the proportion between deaths and population of all ages, affords a convenient measure of the varying health of a given community; but in any comparison between one community and another, or between one community and itself at any considerable interval of time, it is necessary to correct the general death-rate for differences in the sex and age distribution of the population; for it is self-evident that with equal degrees of healthiness a population that contains a larger proportion of very young children or of very aged persons will have a higher death-rate than a population in which the proportion of such persons is lower; and the same, though in a smaller degree, will be the case when the population contains an abnormal proportion of males, inasmuch as the male death-rate is always higher than the female death-rate.

As regards England and Wales, taken as a whole, tables are added to these Annual Reports (Tables 24, 25), which give the death-rate for each sex at each of twelve successive age-periods in each year since civil registration began; and it is to the fluctuations shown in these tables, rather than to the fluctuations in the general death-rate, that most importance should be attached by those who desire great accuracy. Limitations of time and space render it impossible to give similar tables for the subdivisions of the country. There is, however, a table (Table 26) which gives the death-rates in each county at each age-period for persons, without distinction of sex; and as the differences of sex-distribution between one county and another, or between one county and itself in different years, are not sufficiently great to cause more than a scarcely appreciable difference in their general death-rates, that table will be found sufficient for all practical purposes of comparison.

Disregarding, then, the insignificant differences due to any change that may have occurred in sex-distribution, and limiting ourselves to persons, we have in the following summary table the annual death-rates at each age-period in 1882, 1881, and the preceding quinquennium; and it will be noted that in the two years 1881 and 1882 not only did the general death-rate fall considerably below the previous record, but that the fall was shared in by each age-period; so that the conditions that prevailed in each of those two years must have been favourable in all stages of life. This is

a matter of considerable interest, inasmuch as there had previously been as was pointed out in the report for 1879, a tendency to increase in the death-rate at the later age-periods, the falling off in mortality being exclusively confined to the earlier part of life.

TABLE F.—ANNUAL DEATH-RATES at successive age-periods, per 1000 persons living at each period.

YEAR.	All ages.	0—	5—	10—	15—	20—	25—	35—	45—	55—	65—	75—	85—
1876	20·9	62·6	6·1	5·6	5·3	7·0	8·8	12·8	17·6	31·0	62·6	126·7	204·1

1880	20·6	64·5	6·3	5·3	4·7	6·0	7·7	11·6	16·5	30·5	62·3	134·5	275·5
Mean 5 years 1876-80	20·8	62·0	6·1	5·5	5·0	6·5	8·4	12·3	17·3	31·6	64·5	141·8	204·3
1881	18·9	52·1	5·7	5·2	4·6	6·0	8·1	11·9	17·0	30·8	62·7	134·5	275·1
1882	19·6	58·0	6·1	5·3	4·7	5·9	8·1	11·7	17·0	30·3	61·3	130·7	267·9

Infant mortality.—The deaths of infants in the first year of life numbered 125,020, and were in the proportion of 141 deaths to 1000 births, the mean proportion in the immediately preceding ten years having been 146 (Table 27). The infantile death-rate, as is always the case, was highest in the manufacturing and mining counties, and lowest in the agricultural counties. Thus in Lancashire it was 166, in Durham 160, in the West Riding 158, in Nottinghamshire 157, and in the East Riding and in Leicestershire 156, while in Dorsetshire it was only 93, and in Wiltshire 99.

Centenarians.—Passing from infancy to the other extremity of life, it will be seen in Table 28, that 71 persons who died in the year, namely 17 males and 54 females, were stated each to have completed a century of life, and that one of these, a navy pensioner, was alleged to have been no less than 108 years of age at his death.

Mortality at School Ages.—Among the subjects that in the course of the year were referred to the General Register Office for statistical examination was one which is of so much general interest that it may be well to give an account of it. There is, or was, a very widespread suspicion that the present educational system is acting injuriously upon the health of the children subjected to it, and the question referred to this office by the Educational Department was whether there was any statistical proof of deterioration of health in the children of school age, that is of from 3 to 15 years of age. The answer supplied from this office was as follows:—

“We have no means of giving the death-rates of children of the precise ages 3-13, as requested, for this age-period is not one that is used by us in abstracting deaths. We can, however, give the death-rate of children of from 5 to 15 years of age, and this age-period will probably be a better one than 3-13 to test the possible effect of school-work on children's mortality; for, though the children of three and four years of age are omitted, school can scarcely be supposed to affect them in the way of injury from overwork; and, though boys and girls of 14 and 15 are included, it must be remembered that any injurious effects of overwork at

school that may exist will be carried on after the actual school-attendance is finished. The effect, if there be any, of overwork would be in the latter years of school attendance, viz., the 12th and 13th years, and the injury would cause increased mortality not only in those years but at least for some few years afterwards. The age-period, then, which we take is the decade from 5 to 15 years of age, and the periods we take for comparison are the decennia 1861-70 and 1871-80.

"The death-rate of children (5-15) in 1861-70 was 6·3 per 1000. It fell in 1871-80 to 5·1 per 1000; a decline of 19·05 per cent. The main part in this fall was due to diminished mortality from the chief zymotic diseases namely, small-pox, measles, scarlatina, whooping-cough, diphtheria, fever, and diarrhoea. These diseases caused a mortality of 2·9 per 1000 in the first decennial period, but only of 2·1 per 1000 in the second.

"But after excluding these diseases from the account, as irrelative to the question at issue, there was still a considerable decline in mortality. In the first period 1861-70 the death-rate from all causes other than zymotic was 3·4 per 1000, in the second it was only 3·0.

"But inasmuch as school work, if it be injurious to health, would probably be so by affecting the brain and, generally, the nervous system, it would be well to split up these death-rates from causes other than zymotic, into death-rates from diseases of the nervous system, and death-rates from other causes. When this is done we find that the entire fall was due to diminished mortality from other causes. The rate from these fell from 2·9 to 2·5 per 1000, whereas the death-rate from nervous affections remained unaffected. Indeed if a second place of decimals were taken it would appear that nervous diseases had, slightly, very slightly, increased.

"It would appear, therefore, that, while the mortality of children from all causes and from zymotic causes has considerably diminished, their mortality from diseases of the nervous system has exceptionally remained stationary. The general improvement has not affected this class of diseases."

TABLE G.—ANNUAL DEATH RATE per 1000 LIVING of CHILDREN aged 5-15 in ENGLAND AND WALES in the two decades 1861-70 and 1871-80.

Years.	All Causes.	Principal Zymotic Diseases.	Diseases of Nervous System.	Other Causes.
1861-70	6·3	2·9	0·5	2·9
1871-80	5·1	2·1	0·5	2·5

To the above answer to the question addressed to this office may now be added the supplementary fact that the figures for 1881 and 1882 also showed a further and considerable decline in the deaths of children of the ages in question from all causes together, and from the chief zymotic diseases, while their death-rate from nervous diseases remained in each of the two years at exactly the same point as in the two preceding decades.

It may also be well to note that tubercular meningitis or acute hydrocephalus is not included in the foregoing table among diseases of the nervous system; and that the mortality ascribed to this cause was somewhat higher in 1881 and 1882 than in 1861-70. Both in 1881 and 1882 the death-rate among children of school age from this cause was 0·22 per 1,000, whereas in 1861-70 it averaged 0·20.

These statistics doubtlessly tend to support the view that the strain of education produces in a certain proportion of children injurious effects

upon the brain and nervous system; and, indeed, that such should be the case might be anticipated, for a certain amount of risk must almost necessarily be attached to the increased use of an organ, and such risk must be accepted as the inevitable drawback from counterbalancing advantages. At the same time it is necessary to be very guarded in drawing conclusions from these figures; for it must be admitted that the causes of death to which children succumb are far from being stated in medical certificates with such care and precision as would justify us in attaching much practical importance to slight fluctuations under one or another heading.

Sex.—Of the deaths registered in the year, 265,767 were of males, and 250,887 were of females. The male death-rate was 20·7, and the female death-rate was 18·5, the mean annual rates for the preceding decennium (1872–81) having been 22·4 and 19·8 respectively. The male death-rate has therefore declined by 7·6 per cent. and the female death-rate by 6·6 per cent. from the preceding decennial mean. Out of equal numbers living of each sex there died 1118 males to 1000 females. The average proportion for the ten preceding years was 1131 to 1000. The falling off in mortality was, therefore, shared by males in higher proportion than by females.

Urban and Rural Mortality.—The death-rate in the urban population, consisting of some fifteen and a half millions of persons, was 21·1, while that of the rural population, comprising some ten and a half millions, was 17·2 (*see* Table 47). Compared with the previous ten years (1872–81) the urban rate declined 7·0 per cent., and the rural rate 8·0 per cent. Out of equal numbers living there died 123 persons in the urban to 100 persons in the rural population.

In comparing the urban and the rural mortalities with each other, it is important to remember that the age and sex distribution differs widely in the two populations, and that the differences tell largely in favour of the urban population, which contains a much smaller proportion of aged persons and a much larger proportion of persons in the prime of life, as also a much larger proportion of females, than does the rural population; and that, though these favourable conditions are somewhat counterbalanced by there being in towns a larger proportion of young children, whose mortality is always high, yet this disadvantage is by no means an equivalent for the above-mentioned advantages.

For example if we take the death-rate in England and Wales at each age-period in the last completed decennium (1871–80) as a standard, the general annual death-rate in the aggregate urban sanitary districts, including London, should have been 20·40 per 1000, and the death-rate in the aggregate rural sanitary districts should have been 22·83 per 1000, while the death-rate in the whole of England and Wales was 21·27. In other words on the hypothesis that the urban and rural districts were equally healthy, the death-rate in the former should have been 4·09 per cent. below that of England and Wales, and the death-rate in the latter 7·33 per cent. above it.

REGISTERED CAUSES OF DEATHS.

In my last Annual Report (p. xxi) I made an appeal to medical practitioners, asking them to use greater care and precision in stating the causes of deaths in their certificates. That appeal I must again repeat. The number of certificates in which the cause of death is inadequately stated is so large, that it is impossible to send out letters of inquiry asking for further information in each individual case. There were for instance no less than 1,852 certificates in the year, in which the cause of death was simply stated to be “dropsy,” a symptom of cardiac, of renal, and of

pulmonary disease alike. So far, however, as the work of the department would permit, the practice introduced in 1881 was continued through 1882, and letters of inquiry were sent out in 1844 cases. The results of some of these inquiries were as follow, and show how necessary some such practice had become. In 413 cases the assigned cause of death was pyæmia or septicæmia without further specification; it was found by inquiry that of these 413 cases 123 were connected with parturition; 170 more were due to diseases and injuries, the nature of which was given in answer to the application; while in 120 no additional information was elicited. Again, 432 letters were sent out concerning cases of women of childbearing ages, in which the assigned cause was simply peritonitis. In 179 of these it was ascertained that the peritonitis was connected with parturition; in 51 more that it was connected with assignable injuries or diseases; while in 202 no further information was elicited. Without entering into further detail, it will be enough to state that one result of the 1,844 letters of inquiry was to add no less than 428 deaths to those assigned to puerperal fever or to other incidents of childbirth. Without this correction the mortality of women in childbirth would have been 4·61 to 1000 children born alive; with the correction the rate was 5·09; a difference, amounting to no less than 10 per cent.

The assigned causes of death were distributed in the several classes as follows:—

TABLE H.—MORTALITY FROM THE SEVERAL CLASSES OF DISEASES.

Causes of Death.	Total Deaths in 1882.	Rate per Million living.		
		1882.	1881.	1871-80.
Zymotic diseases - - -	81,560	3,088	2,660	3,727
Parasitic diseases - - -	969	37	39	57
Dietic diseases - - -	1,808	68	65	63
Constitutional diseases - -	89,684	3,395	3,328	3,597
Developmental diseases - -	41,148	1,558	1,583	1,676
Local diseases - - -	253,329	9,591	9,348	9,928
Violence - - -	17,689	669	697	737
Ill-defined and not specified causes -	80,477	1,154	1,160	1,611
All causes - - -	516,654	19,560	18,880	21,396

Zymotic or Specific Febrile Diseases.—The deaths ascribed to this class of causes were 81,560, being in the proportion of 3088 to a million persons living. This rate, though higher than in the immediately preceding year, 1881, was very much lower than that in the preceding decade, 1871-80. The main decline of mortality was under the heading of diarrhæal disorders and of continued fevers, which killed respectively 664 and 303 persons per million living, against 943 and 488 in the preceding completed decade. These declines in mortality were, however, to some extent counterbalanced by increase under several headings, namely, measles, whooping-cough, diphtheria, and puerperal fever. The deaths from measles were 481, from whooping-cough were 577, from diphtheria were 151, and

from puerperal fever were 98 per million persons living, against 379, 513, 121, and 74 respectively in the last completed decennium.

The increase of deaths under the heading puerperal fever was to a great extent due to the sending out of letters of inquiry respecting deaths ascribed to peritonitis and the like, by which 368 deaths were added to puerperal fever, which would otherwise have been classed elsewhere. Without these 368 deaths the rate would have been only 83 in 1882, against 74 in 1871-80. As puerperal fever is confined to parturient women, it is better to base its calculated death-rate on the number of births (Table 44) rather than on the number of the population. The deaths, then, ascribed to it in 1882 were in the proportion of 288 to 100,000 live-births. If we omit, for the sake of comparison with previous years, the 368 deaths due to letters of inquiry, the rate would be 247 against 209 in the decennium 1871-80. There was thus, after all correction, a very considerable and real increase in the mortality from this disease in 1882, as also there had been in the previous year 1881, when the rate, if similarly reduced for comparison, would have been 228. This increase in 1881 and 1882 in the deaths ascribed to puerperal fever was coincident, as has been almost invariably the case whenever there has been a similar increase, with an increase in the deaths ascribed to erysipelas. This coincidence deserves careful consideration on the part of those who are engaged in midwifery practice.

The increase of mortality under the heading diphtheria may also, like that from puerperal fever, very possibly be in some degree only apparent; for, as was pointed out in the last Annual Report, the returns of mortality from this disease are very untrustworthy, there being apparently no general consensus among certifying medical men as to the precise use of this term. It is not uncommon in going through the death-registers to find all the fatal cases of throat-disease in some one medical man's practice in a small area returned as cases of diphtheria, while all those in the same area in a second man's practice are returned as ulcerated throat or simply as sore-throat. Again, what some return as diphtheria, others return as croup. Putting diphtheria and croup together, as being terms at any rate frequently used interchangeably, the mortality in 1882 was at the rate of 325 per million living, against 259 in 1881 and an annual mean of 291 in 1871-80.

The increased mortality under the two headings measles and whooping-cough was real and considerable. As these diseases are mainly fatal in the first five years of life, it will be well to limit our comparison to the mortality from them at that period of life. The death-rate, then, from measles among children under five was 2.57 per 1000 in 1871-80, but was 3.55 in 1882; the death-rate from whooping-cough at that age was 3.65 in 1871-80, but rose to 4.26 in 1882.

Parasitic Diseases.—The deaths ascribed to this class of diseases were fewer in proportion to the population than in any previous year (Table 30). The decline was under the heading thrush, and was probably due to more careful specification by medical men of the cause of death in the case of infants.

Dietic Diseases.—Among the diseases in this class, the only one that requires notice is alcoholism. The deaths ascribed to this cause were 50 per million living, and more numerous in proportion to the population than in any single year since 1864, when they were 51 per million persons living. In face of the very great diminution in the consumption of alcoholic drinks, as shown by the Customs and Excise returns, and of the fact that the purveyors of spirituous drinks, as shown in the recent Census Report, declined in the interval between 1871 and 1881 by no less than 17.7 per cent. for equal populations, it seems fair to conclude that the

apparent increase in fatal intemperance did not indicate a real increase, and was due to greater conscientiousness in stating the cause of death.

Constitutional Diseases.—The deaths classed under these diseases numbered 89,684, and were in the proportion of 3395 per million population, against a proportion of 3328 in 1881, and 3597 in 1871–80.

The decline of mortality in 1882, as compared with 1871–80, was entirely under the heading phthisis, and it is noticeable that the deaths ascribed to this cause were fewer in proportion to the population in each of the three successive years 1880, 1881, and 1882 than they had ever been before (Table 30). The decline, moreover, would appear to have been real and not only apparent; for, though doubtless the term phthisis is often used in certificates with considerable looseness, yet there was no corresponding increase of mortality under those headings which might be confounded with it. So far indeed was this from being the case, that there was, coincidently with the decline in phthisis, a decline in the deaths ascribed to other forms of tuberculosis and scrofula, in the deaths ascribed to diseases of the respiratory organs, and also in the deaths ascribed to ill-defined or not specified causes. The doubt, therefore, which was expressed in a former report (Forty-second Report, p. xxx.), as to the reality of the apparent improvement in regard to tubercular mortality, though it still cannot be entirely dismissed, yet rests on a less firm basis than was the case at that time; for there was then an increase to be noticed in the mortality assigned to respiratory diseases.

The deaths ascribed to cancer were more numerous in 1882 in proportion to population than they had ever been before; but the increase under this heading, as also under the heading diabetes, may almost certainly be ascribed to increased accuracy of diagnosis and certification.

Developmental Diseases.—The deaths ascribed to old age have for many years been diminishing in their proportion to the population, and in 1882 were fewer in proportion than in any former year. As old age is the natural termination of life, and the ailment of which all prefer eventually to die, this aggregate falling off in the mortality from this cause, if real, would not be an indisputable advantage. But doubtless much of the falling off under this heading is merely due to gradual improvement in the specification of the causes of which the old die. This, however, does not account for all the apparent decline in the mortality. For there has been in each of the three years 1880, 1881, and 1882 a sensible decline in the mortality of persons of advanced age from all causes; and in 1882 especially the death-rate of persons, 55 years of age and upwards, whether males or females, was lower than it had been for very many years, probably than it had ever been before (see Tables 24 and 25). The main factor that determines the death-rate of the aged is temperature, and especially the temperature of the winter months; and in 1882 the mean temperature of each of the six months of the first and fourth quarters was above the average.

Passing from old age to the other extreme of life, the deaths attributed to premature birth were 12,434, being in the proportion of 1399 such deaths to 100,000 live births. The proportion of such deaths to births has been apparently increasing. In the quinquennium 1871–75 the ratio was 1260 to 100,000 live-births; in the next quinquennium 1876–80 the rate rose to 1338; in 1881 it was 1363; and finally in 1882 it was, as before stated, 1399. Moreover, concomitantly with this increased mortality from premature birth, there was an increase in the deaths ascribed to congenital malformations. In the quinquennium 1871–75, these deaths were 185 per 100,000 live-births; in 1876–80 the rate rose to 239; in 1881 it was 249; and finally in 1882 as much as 254. As the infantile death-rate from all causes together has not been increasing, it is at any rate allowable to

suspect that the apparently increased mortality from premature birth and from congenital malformation has been only apparent, and due to transference of deaths from one alleged cause to another, the certification of causes of death in the case of infants being always extremely vague. Still it is not impossible that the apparent increase of premature births may be real, and connected with the marked increase in the employment of women in industrial occupations, as shown in the recent Census Returns.

Local Diseases.—In this group, which comprises nearly a half of all deaths, there was a considerable falling off of mortality as compared with the decade 1871–80, but a slight rise as compared with the year 1881. The decline of mortality was mainly under the headings convulsions, liver disease, and diseases of the respiratory organs. The mortality from diseases of the nervous and of the circulatory systems remained very nearly at the previous decennial average; while the mortality ascribed to diseases of the urinary system continued to increase, as it had done for many previous years, doubtlessly in consequence of more accurate diagnosis and specification of causes, by which the mortality from ill-defined and non-specified causes, has undergone progressive decrease.

Violent Deaths.—In this group there was a considerable decline of mortality, compared both with the immediately preceding year 1881, and with the preceding decade. The decline was in the deaths from accident and negligence, which were fewer in proportion to the population than in any year included in the table (Table 30), which goes back as far as 1859.

Of the deaths ascribed to accident and negligence about one quarter are of children under five years of age, and of these nearly one half are of infants in their first year of life. The form of accident to which by far the greatest part of these infantile deaths is due is suffocation in bed. As might be anticipated there is practically no difference in this first year of life between boys and girls in regard to their liability to fatal accidents. But no sooner is the first year completed, than a marked difference of such liability begins to manifest itself between the sexes. Already the boys begin to show a more venturous character and to display greater readiness to amuse themselves with fire, water, horses, and other dangerous attractions; and this difference increases with each successive year of childhood. Taking the returns for the last quinquennium, 1878–82, as a basis, it is found that the fatal accidents of males are 6 per cent. more numerous than the fatal accidents of females in the first year of life, a difference which corresponds pretty closely with the difference between the number of boys and girls living at that age. In the second year, the male accidents are 30 per cent. more numerous than the female; in the third year 51 per cent. more numerous; in the fourth year 61 per cent. more numerous; and in the fifth year of life the excess is no less than 74 per cent. After this age, the influence of occupation begins to come into operation, and the fatal male accidents are almost four times as numerous as the fatal female accidents.

It must not be supposed that this much greater liability of males to fatal accident is in any material degree the explanation of the higher death-rate of the male sex. The total mortality from violence is too small to affect the general death-rate to any great extent; and such small difference as is produced by this cause in the death-rates of the two sexes is to a very great extent counterbalanced by the mortality of females from childbirth and puerperal fever. The death-rate of males in the last completed decade (1871–80) was 22·61 per 1000, and that of females 20·00. Had there been no deaths either from violence or from childbirth and puerperal fever, the death-rates would have been 21·49 and 19·32.

Ill-defined and non-specified Causes.—It has already been stated that the number of deaths in which the cause is imperfectly stated has declined in a most satisfactory manner. I feel bound, however, to repeat the complaint made in my last report, that the class of cases in which more than in any other there is a right to expect careful and complete statement of cause of death, namely, those cases in which there is public inquiry at public expense into the circumstances attending the death, by no means fulfils that just expectation. For instance, in the year 1882, out of the inquests held in the registration district and city of Norwich, there were 55 in which the death was not due to violence but to some kind of disease. In only 13 of these 55 cases was the kind of disease stated in the verdict; in the remaining 42 cases the finding was simply worded "natural causes," which for all purposes of classification of death by their causes is, I need hardly say, quite useless.

Certification of the Causes of Death.—The causes of 469,117 or 90·8 per cent., of the 516,654 deaths were certified by registered medical practitioners; while the causes of 27,367 or 5·3 per cent. were certified by coroners. The causes of the remaining 20,170, or 3·9 per cent., of the total deaths were not certified. The proportion of uncertified deaths varied very considerably in different parts of England and Wales. Thus excluding the metropolitan counties of Middlesex and Surrey, the percentage did not exceed 1·1 in Wiltshire, 1·4 in Rutlandshire, and 1·7 in Berkshire, while it ranged upwards to 6·2 in Herefordshire, 6·7 in Cumberland, and 6·9 both in Cornwall and in Durham. In the metropolis the proportion did not exceed 1·2 per cent., whereas in Wales it was 10·4 per cent.

The proportion of uncertified deaths showed a further slight decline from the proportions in 1880 and 1881, which were 4·3 and 4·1 per cent. respectively.

PROGRESS OF REGISTRATION.

During the year 1882 the number of names added to the printed alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales was 1,814,478. At the close of the year the aggregate number of names in these indexes, which on 31st December 1882 embraced a period of 45½ years, was 66,619,275. The total number of searches in 1882 (including those in non-parochial and other records) was 33,597, showing an increase of 1292 or 4·0 per cent. upon the number in the previous year; the number of certificates issued was 27,551, or 3·7 per cent., more than in 1881. The amount received as fees for searches and certificates in the year 1882, and paid into Her Majesty's Exchequer, was 5,170*l.* 15*s.* 0*d.* (Table 48.)

For a list of the various public registers and records lodged in the General Register Office, Somerset House, see the Registrar-General's 34th Annual Report, pp. xxi.-xxii. and xxv.-xxvi.

MORTALITY OF THE ARMY.

From returns furnished by His Royal Highness the Field Marshal Commanding-in-Chief, it appears that the average strength of the Army at home and abroad was 189,229, and that the number of deaths was 2224; so that the rate of mortality was 11·8 per 1000, against 14·0 in 1881, 17·6 in 1880, and 22·2 in 1879.

The average strength of the Army at home was 94,295, and the deaths were 806; while the average strength of the Army abroad was 94,934, and the deaths were 1418. The death-rate at home was, therefore, 8·5 per 1000, and the death-rate abroad 14·9. (See Tables 54-61.)

MORTALITY IN THE NAVY.*

The total force in the service afloat, corrected for time, in 1882 was 43,475. The deaths were 413, of which 299 were due to disease and 114 to injury. The death-rate from disease alone was 6·87 per 1000, and from violence 2·62 per 1000, against 5·27 and 5·67 respectively in the preceding year, 1881. The great difference in the death-rate from violence in the two years was due to the large loss of life in 1881 from the explosion on board the "Doterel."

Of the 114 deaths from violence 42 were due to wounds received in action, 36 to drowning, 13 to falls from aloft, 2 to suicide, and 21 to other forms of violent death.

The assigned causes of the 299 deaths due to disease were as follow:—

Eruptive fevers	-	-	3	Diseases of—		
Continued fevers	-	-	81	Circulatory system	-	24
Paroxysmal fevers	-	-	25	Absorbent system and ductless glands	-	1
Other febrile diseases	-	-	8	Respiratory system	-	45
Rheumatism	-	-	5	Digestive system	-	38
Tubercular diseases	-	-	40	Urinary and generative system	-	6
Other constitutional diseases	-	-	2	Cellular tissue, and cutaneous system	-	2
Diseases of nervous system and of organs of special sense	-	-	17	Debility, &c.	-	2

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships not in Her Majesty's service, and of foreign vessels trading to or from any port in the United Kingdom, are required, under a penalty, to transmit returns of all births and deaths occurring on board to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrar-General of England, Scotland, or Ireland. Returns of a similar character are also received from the commanding officers of Her Majesty's ships. The certified copies of births and deaths thus received by me constitute the "Marine Register Book." During the year 1882 the entries recorded in this Register were 353 births and 5040 deaths. Of these 5040 deaths, 2116 were returned as of English origin, and 388 were simply described as of "British" origin.

Among *passengers* on board merchant vessels at sea (see Table 62), 266 births and 678 deaths were reported during 1882; the deaths showed an increase 10·8 per cent. upon the number returned in the preceding year.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports (see Table 63), that the number of merchant seamen at sea in registered vessels during 1882 was 195,937. In 1874 the number was 203,606, but from this period to the year 1881 the number had steadily declined. The deaths from all causes among these merchant seamen during 1882 were 4659, equal to a rate of 23·8 per 1000 of the strength, exceeding by 2·4 the average annual rate (21·4) during the 31 years 1852–82.

* The facts in this paragraph are derived from Dr. Lloyd's Report to the Director General of the Medical Department of the Navy.

EUROPEAN STATES.

In Tables 73-87 will be found international vital statistics relating to thirteen of the principal European States, published in accordance with a resolution of the Statistical Congress, held at St. Petersburg in 1872. Table 73 affords the means for comparing the marriage, birth, and death rates in each State in a series of years, with the mean rate in each series; Tables 74-87 contain detailed returns for each State.

The general recovery in the *marriage-rate* observable in the different European States in 1881 continued in 1882, except in the Netherlands, Denmark, Belgium, and France. In Italy the rate, although lower than that recorded in 1881, was above the mean rate in the 18 years 1861-80. The rates in 1881 ranged from 12.7 in Sweden, 13.4 in Norway, and 13.6 in Switzerland, to 15.6 in Prussia, 15.7 in Italy, 16.4 in Austria, and 20.3 in Hungary. The rate in England and Wales was 15.5.

The *birth-rates* in the various States differed but little from those of the previous year, but varied in almost constant relation with the variations of the marriage-rate. The birth-rates ranged from 24.8 in France, 28.8 in Switzerland, and 29.4 in Sweden, to 37.1 in Italy, 37.2 in the German Empire, 37.3 in Prussia, 38.9 in Austria, and 44.6 in Hungary. The birth-rate in England and Wales was 33.7 per 1000. In France there were 1619 fewer marriages, and 1481 fewer births than in the previous year; and the marriage and birth-rates in 1882 were considerably below the mean rates during the 20 years 1861-80.

With the exception of Norway the *death-rates* in the various States in 1882 were below the respective average rates in preceding years. In Sweden, Norway, and Denmark, the death-rates in 1882 did not exceed 17.4, 18.4, and 19.5 respectively; the next lowest was 19.6 in England and Wales. The highest rates were 25.7 in the German Empire, 27.5 in Italy, 30.8 in Austria, and 36.6 in Hungary.

I have the honour to be,

Sir,

Your faithful servant,

BRYDGES P. HENNIKER,

Registrar-General.

REMARKS ON THE METEOROLOGY OF THE YEAR 1882.

BY JAMES GLAISHER, Esq., F.R.S., &c.

The following remarks with regard to the excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from observations made about London, but they may be taken as applying generally to the whole country.

Atmospheric pressure.—The readings of the barometer in the first 6 days of the year were below their average values, the mean daily deficiency being 0.23 in.; for the 49 days from January 7th to February 24th they were mostly above, the mean daily excess being 0.51 in.; from February 25th to March 6th they were below by 0.55 in.; from March 7th to the 19th the daily excess averaged 0.33 in.; from March 20th to April 2nd the readings were on the average in defect by 0.09 in.; from the 3rd to the 10th they were in excess by 0.25 in.; from April 11th to the 18th the mean readings were 0.32 in. below their averages, then slightly above for 3 days; from April 22nd to May 5th the readings were 0.34 in. below their averages; then for 14 days above by 0.33 in.; from May 20th to May 26th the readings were 0.21 in. below; they were above from May 27th to June 2nd by 0.26 in., then for 12 days they were 0.19 in. below, and for 3 days somewhat above; from June 18th to the 24th the readings were in defect by 0.12 in. daily, from June 25th to July 3rd they were about 0.11 in. in excess, from the 4th to the 18th there was a deficiency of 0.33 in. daily, then for 3 days there was a slight excess, followed by 4 days of a slight deficiency. From July 26th the readings were high for 17 days, being on the average 0.29 in. in excess, then they were low for 23 days, to September 3rd, being on the average 0.24 in. in defect; from September 4th to September 9th the readings were 0.18 in. above their averages; then for 31 days, to October 10th, there was an excess of pressure of 0.24 in. From October 11th to 13th the readings were 0.21 in. below the average, then for 5 days they were nearly of the average value; for the 24 days from October 19th to November 11th the mean daily deficiency was 0.27 in. November 12th and 13th were nearly of their average value, the 3 days November 14th to 16th were 0.33 in. below their average, then 2 days of nearly the average value were followed by 9 days of low readings, the deficiency being 0.35 in.; from November 28th to December 2nd there was a slight excess, followed by low readings on every day excepting the 19th and 20th to the end of the year, the average daily deficiency being 0.35 in.

The highest reading in the year at the height of 150 feet was 30.784 inches on January 18th, and the lowest 28.613 inches on October 24th; thus giving a range of 2.171 inches.

Temperature.—Till the 16th day of January the weather was warm; on the 17th a cold period set in and continued till the 26th, the average daily deficiency of these 10 days was 2.6; on the 27th the weather became suddenly warm, and continued till the end of the month, the excess being 4.4 daily; then for 10 days it was cold, the deficit being 3.3; from February 11th to April 24th, a period of 73 days the temperature was warm, being 4.3 above its average; from the 25th to May 1st, the average daily deficit of these 7 days was 3.9, for 12 days the weather was rather warm, then for five days it was cold, averaging 2.6 daily; from May 19th to the 31st, there was an excess of 2.5; this was followed by 122 days of cold, the mean deficiency of which was 2.2; from the 1st of October to the 15th the temperature was in excess, being 2.3 daily; then from the 16th to the 30th, the deficit was 1.3; from October 31st to November 10th the excess of mean temperature was 3.9; these 11 days

were followed by another period of the same length, the deficiency being $3^{\circ}\cdot 8$ daily; for 5 days the temperature was warm, being $5^{\circ}\cdot 5$ above the average, then for 19 days it was cold, the deficiency being $5^{\circ}\cdot 6$ daily; and from December 16th to the end of the year the excess of mean temperature was $0^{\circ}\cdot 8$; the last few days were very warm, being $12^{\circ}\cdot 4$, $15^{\circ}\cdot 7$, $15^{\circ}\cdot 2$, $13^{\circ}\cdot 9$, $12^{\circ}\cdot 8$, and $12^{\circ}\cdot 6$ respectively above their averages, and the mean of these six was $13^{\circ}\cdot 8$.

The highest temperature of the air in the year was 81° on August 12th, and the lowest was $24^{\circ}\cdot 0$ on December 24th, thus giving a range of $57^{\circ}\cdot 0$.

Rainfall.—The fall of rain about London in January was $1\cdot 35$ in.; in February was $1\cdot 14$ ins.; in March $1\cdot 14$ ins., being respectively $0\cdot 55$ in., $0\cdot 44$ in., and $0\cdot 41$ in., below their averages. The fall in April was $2\cdot 40$ ins., being $0\cdot 65$ in. above its average; in May was $1\cdot 37$ in., being $0\cdot 71$ in. below its average; in June was $2\cdot 35$ ins., being $0\cdot 35$ in. above its average. In July the fall of rain was $2\cdot 45$ ins.; in August was $1\cdot 16$ in.; in September was $2\cdot 40$ ins., being respectively $0\cdot 11$ in., $1\cdot 29$ in., $0\cdot 01$ in. below their averages. The fall in October was $5\cdot 42$ ins., being $2\cdot 62$ ins. above its average. In November it was $2\cdot 19$ ins., and in December was $1\cdot 78$ in., being respectively, $0\cdot 15$ in. and $0\cdot 22$ in. below their averages. The total fall during the year was $25\cdot 2$ ins. The total falls of rain ranged from $61\cdot 73$ ins. at Bolton, $60\cdot 23$ ins. at Stonyhurst, $54\cdot 75$ ins. at Barnstable, to $26\cdot 23$ ins. at Royston, $26\cdot 45$ ins. at Cambridge, and $27\cdot 14$ ins. at Camden Square.

Thunderstorms occurred on 59 days during the year, of these 13 were in June, 10 in November, 8 in May, 7 in both August and September, 5 in both April and July, 3 in October, and one in March.

Thunder was heard but lightning was not seen on 57 days during the year. The greatest number of days in one month was 15 in June, and the least was one in October. Thunder was not heard at any place in January, February, March, or December.

Lightning was seen but thunder was not heard on 34 days during the year, none of which were in January, February, or March.

Solar halos were seen on 55 days during the year. On 11 in November, 8 in September, 7 in May, 6 in July, 4 in March, April, and December, 3 in February, 2 in January, June, August, and October.

Lunar halos were seen on 45 nights in the year. On 8 in both November and December, 7 in March, 6 in October, 5 in January, 4 in September, 3 in April and May, one in August, and none in February, June or July.

Aurora Boreales were seen on 17 days during the year, on 8 in November, 4 in October, 3 in February, and 2 in December.

Snow fell on 42 days during the year, 15 in December, 14 in November, 4 in March, 3 in January, 2 in both February and October, and one in April and May.

Hail fell on 116 days during the year, 19 of which were in November, 16 in March, 13 in January and April, 11 in February, 10 in June, 9 in December, 8 in May, 6 in October, 5 in July, and 3 in both August and September.

Fog prevailed on 155 days during the year, and they were distributed as follows: January 17, February 12, March 12, April 9, May 9, June 8, July 5, August 10, September 21, October 17, November 15, and December 20.

PRELIMINARY TABLES.
(1882.)

TABLE 1.—ENGLAND.—Population, Marriages, Births, and Deaths registered in the Forty-five Years 1838-82.

YEARS.	Estimated POPULATION in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,367,699	118,067	336,134	463,787	343,700	121,087
1839	15,514,265	122,106	346,333	492,574	338,984	153,590

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated from the numbers enumerated at the last five Censuses taken. For the estimated numbers of males and females in each year, and population estimates for years prior to 1880, see Table 71.

TABLE 2.—ENGLAND.—Persons Married, Births, and Deaths to 1000 living in the Forty-five Years 1838-82.

* Some marriages between Protestants and Roman Catholics are solemnised twice; such cases are, however, so few, that this source of error may be practically disregarded.

TABLE 3.—ENGLAND.—Of 100 Marriages, those solemnised according to, and not according to, the Rites of the Established Church, in the Forty-two Years 1841-82.

YEARS.		TOTAL MARRIAGES.	ACCORDING TO THE RITES OF THE ESTABLISHED CHURCH.					NOT ACCORDING TO THE RITES OF THE ESTABLISHED CHURCH.			
			Licenses, including Special Licenses.	Banns.	Superintendent Registrar's Certificate.	Not stated.	TOTAL IN ESTABLISHED CHURCH.	TOTAL NOT IN ESTABLISHED CHURCH.	Roman Catholics.	Other Religious Denominations, including Jews and Quakers.	Civil Marriages in Superintendent Registrar's Office.

Mean Annual Rate to 1000 in each quarter of the 45 years -					13'0	16'6	15'8	19'4

* The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For these inequalities corrections have been made in the above calculations.

* The prices of coal in 1853-81 are derived from a Parliamentary Return (225 of 1881) furnished by the Registrar of the London Coal Market, by order of the House of Commons; the quotation for 1882 is the mean of the four quarterly averages. The quarterly averages were from time to time supplied to the Registrar-General by Mr. Richard Meade, of the Mining Record Office.

Thirty-one years 1852-82	5,816,002	124,708	21·4

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a seaman die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a passenger die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE 72.—Changes in the Constitution of Registration Districts and Sub-districts during the Year 1882.

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.
(2.) The Populations quoted are the Numbers enumerated at the Census of 1881.

No. of District.	NAME OF DISTRICT.	Date of Change.	Nature of Change.
14	LONDON CITY -	1882. 1 January -	The sub-districts of <i>Castle Baynard</i> and <i>Allhallows Barking</i> were united under the name of <i>Allhallows Barking</i> (aggregate population 13,666).
163	BRIXWORTH -	1 July -	The sub-districts of <i>Spratton</i> and <i>Brixworth</i> were united under the name of <i>Brixworth</i> (aggregate population 5,847).
215	PLOMESGATE -	" -	The sub-districts of <i>Earl-Soham</i> and <i>Framlingham</i> were united under the name of <i>Framlingham</i> (aggregate population 5,820).
242	CRICKLADE -	" -	See CIRENCESTER 331.
247	DEVIZES -	1 January -	The sub-district of <i>Bromham</i> was abolished, and the sub-districts of <i>Devizes</i> and <i>Lavington</i> re-arranged as follows:— <i>Devizes</i> sub-district comprising St. John Devizes, St. Mary Devizes, St. James Devizes or South-broom, All Cannings, Ailington, Alton-Barnes, Bishop's Cannings, Bromham, Chittoe, Etchinghampton, Fullaway, Poulshot, Rowde, Stanton St. Bernard, and Stert (aggregate population 13,256); and <i>Lavington</i> sub-district, comprising Beeching-Stoke, Chirton, Earl Stoke, Easterton, Great Cheverell, Little Cheverell, Marden, Market Lavington, Marston, Patney, Potterne, Urchfont, West Lavington, and Worton (aggregate population 7,274).
250	WESTBURY -	1 August -	The sub-district of <i>Edington</i> was abolished. The parishes of Keovil, Steeple-Ashton, and Great Hinton (aggregate population 1,414), were added to <i>Bradley</i> sub-district, and the remainder, consisting of the parishes of Edington, East Coulston, and Bratton in Westbury civil parish, (aggregate population 1,693) were added to <i>Westbury</i> sub-district.
331	CIRENCESTER -	1 July -	The parish of Marston-Maisey (population 185) was transferred from the sub-district of <i>Fairford</i> to that of <i>Cricklade</i> (242: 2).
419	GRANTHAM -	1 April -	The sub-districts of <i>Colsterworth</i> and <i>Denton</i> were united under the name of <i>Grantham South</i> , except that the parish of Somerby (population 1,189) was transferred to <i>Grantham</i> , now <i>Grantham North</i> , and the parish of Barrowby (population 807) was transferred from <i>Grantham North</i> to <i>Grantham South</i> .
431	NOTTINGHAM -	1 July -	The sub-districts of <i>Castle</i> and <i>Park</i> were united under the name of <i>Park</i> (aggregate population 16,237); and the sub-districts of <i>Hyson Green</i> and <i>Radford</i> were united under the name of <i>Radford</i> (aggregate population 20,954).
467	BRADFORD -	1 August -	The township of Manningham (population 37,304) was transferred from the sub-district of <i>Horton</i> to that of <i>Bradford West End</i> .
513	HOWDEN -	" -	The sub-district of <i>Newport</i> was re-named <i>Wallingfen</i> .
530	BRIDGEND -	1 November -	The parishes of Llanharan, Llanilid, and Peterstone (aggregate population 880) were transferred from the sub-district of <i>Maesteg</i> to that of <i>Cowbridge</i> , and the parishes of Higher Coychurch, Lower Coychurch, and Pencoeed (aggregate population 1,335) were transferred from the <i>Maesteg</i> sub-district to that of <i>Bridgend</i> .
595	LLANDOVERY -	1 October -	The new civil parish of Quarter Bach formed out of part of the parish of Llangadock (population 1,478) was transferred from the <i>Llangadock</i> sub-district to that of <i>Llandeibis</i> (596: 5).
596	LLANDILOFAWE -	" -	See LLANDOVERY 595.
639	CONWAY -	" -	The sub-districts of <i>Llechewedd-Inaf</i> and <i>Consegoy</i> were united under the name of <i>Consegoy</i> (aggregate population 6,801).

Under the provisions of "The Divided Parishes and Poor Law Amendment Act, 1876," small changes were made on the 25th March 1882 in the constitution of the following Districts:—OSWERT (190), CHELMSFORD (192), BLANDFORD (200), WYTHMOUTH (204), DORCHESTER (205), CLEOBURY MORTIMER (247), KIDDERMINSTER (278), DROGHDA (333), BROMSGROVE (334), BOSTON (417), HORNCASTLE (421), SPILSBY (423), BURCOVE (446), NORTHWICH (447), BOTHERHAM (510), DONCASTER (511), DURHAM (540), HOUGHTON-LE-SPRING (551), and CHESTER-LE-STREET (553).

VITAL STATISTICS OF EUROPEAN STATES.

TABLE 73.—Proportion of Persons Married, Births, and Deaths per 1000 of the Population in THIRTEEN EUROPEAN STATES.

(Tabulated from returns furnished by the authorities of the various States.)

YEARS.	ENGLAND AND WALES.	DENMARK.	NORWAY.	SWEDEN.	AUSTRIA.	HUNGARY.	SWITZER- LAND.	GERMAN EMPIRE.	PRUSSIA.	THE NETHER- LANDS.	BELGIUM.	FRANCE.	SPAIN.	ITALY.

1882	37,781,000	280,460	560,920	935,166	835,539	14.8	24.8	22.2

NOTE.—The population in the four years 1862-65 and in the years 1877-79 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Communes in which they were last domiciled.

* Census years. † Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

TABLE 86.—SPAIN. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1861 to 1870.

YEARS.	NUMBERS.					PROPORTION PER 1000 OF THE POPULATION.		
	ESTIMATED POPULATION.	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.	PERSONS MARRIED.	BIRTHS.	DEATHS.
1861	15,879,886	180,781	261,463	634,098	417,764	16.5	39.5	26.3
1862	16,065,124	128,696	257,892	615,919	480,663	16.0	38.3	29.8

1864	16,340,323	126,808	252,806	629,546	469,486	15.5	38.5	28.6
1865	16,428,798	126,917	257,834	632,050	538,580	15.7	37.9	32.8
1866	16,579,080	131,961	268,903	618,861	465,984	15.9	37.2	28.0
1867*	16,716,151	118,409	236,618	634,212	487,151	14.2	37.3	29.1
1868	16,853,212	111,684	228,368	579,464	548,890	13.8	34.4	32.6
1869	16,893,936	127,120	274,340	602,267	550,680	16.2	35.7	32.6
1870	16,935,613	105,548	211,066	599,786	599,609	12.5	35.4	30.1

NOTE.—The Population enumerated at the Census of 1880 was 15,673,536. The estimated Population for Years subsequent to 1861 has been deduced from the Excess of Births over Deaths registered in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* Census year.

NOTE.—The facts for Rome were first included with those for the Kingdom of Italy in 1873.
* Census years. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for each of the other years the population is estimated to the middle of the year. The population in inter-census years are somewhat over-estimated, no account having been taken of emigration.

* The Registration or Union Counties consist of groups of Superintendent Registrars' Districts which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ from the boundaries of Counties (proper).

† These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Abstract of Marriages of 1881. They do not include space occupied by foreshore or tidal water of rivers and creeks.

Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1882.

Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. Divorced men and women who marry are classified in these Abstracts as bachelors and spinsters.

* The 630 Districts, which are arranged according to their local position, are collections of contiguous Parishes or Places, and are nearly always identical with the Poor Law Unions of the same name. They were re-numbered on the 1st January 1891.
† 1. The District of Kensington comprises the two Poor Law Unions of Paddington and Kensington.

NOTE.—For area and population of the Registration Divisions and Counties, see pages 2 and 4.

* The Registration Counties consist of groups of Superintendents Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

* The Superintendent Registrars' Districts (630 in number) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Sub-districts (2168 in number at the end of the year 1882) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; w indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates a Hospital or Infirmary; L a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1882 are given on pages 92-114.

‡ 1. The Registration District of Kensington comprises the two Poor Law Unions of Paddington (St. Mary Paddington and St. John Paddington Sub-districts) and Kensington (Kensington Town and Brompton Sub-districts).

* 629 : 1.—For changes made on 1st October 1882 in the constitution of the Conway Sub-district, see Table 72.

† 630.—The District of Anglesey comprises the two Poor Law Unions of Anglesey (Llangefni, Llandfrydog, and Amlwch Sub-districts) and Holyhead (Bryngwran, Llanddausaunt, and Holyhead Sub-districts).
The parishes of Bodewryd and Rhosbeirio, however, situated in Llanddausaunt Sub-district belong to the Union of Anglesey and not to the Union of Holyhead.

DEATHS IN PUBLIC INSTITUTIONS.

1882.

THE following pages contain the numbers of deaths registered during 1882 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1546 Institutions; of which 725 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 732 Hospitals or Infirmaries; and 89 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1546 Institutions 52,472 deaths were registered during the year, or 10·2 per cent. of the total deaths in England and Wales, against 9·4 and 10·8 per cent. in the two preceding years; 33,041 occurred in Workhouses, 14,550 in Hospitals, and 4,881 in Lunatic Asylums. The proportion to total deaths was 6·4 per cent. in Workhouses, 2·8 in Hospitals, and 0·9 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

Deaths registered in the Public Institutions of England in the Year 1882.

* When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury. The same is done with deaths attributed to Traumatic Tetanus. The figures above give, therefore, only to those deaths from operation and those deaths from Traumatic Tetanus concerning which no further information was obtained.

Of the above 11,406 ACCIDENTS, 94 are stated to have occurred to Persons in a state of INTOXICATION, and 10 to Persons suffering from DELIRIUM TREMENS. And in 335 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

INDEX OF DISTRICTS.

The following Index furnishes a reference to the *Number* of each *Registration District* in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and not under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881.

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 226) and "Index of certain Towns" (page 228).

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having common names in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.
A			Ardleigh . . .	Tendring . . .	195; 4	Barton . . .	Glanford Brigg	15

ALPHABETICAL INDEX

TO

REGISTRAR-GENERAL'S FORTY-FIFTH ANNUAL REPORT.

	PAGES
ACCIDENT ; Male mortality from, exceeds the Female after the first year of life	xx
deaths from, at various Ages	211-217
AGES ; Mean Age at Marriage of Men, Women, Bachelors, Spinsters, Widowers, and Widows, 1867-82. (Table C.)	viii
Marriages of Bachelors and of Spinsters per 1000 living at successive life periods 1870-71-72 compared with 1880-81-82. (Table D.)	ix
Minors married in 1882, and the per-centage to total marriages	ix
at Death	xiii
Death-rates at successive life-periods, 1876-82. (Table F.)	xiv
Deaths under one year	xiv
Deaths over 100 years	xiv
Deaths at School Ages. (Table G.)	xiv-xv
at Death, of Males and Females in each year, 1838-82. (Tables 21, 22.)	xlviii-xlix
Mortality of Males and Females at 12 groups of, 1838-82. (Tables 23-25.)	l-lij
Mortality in Counties, at 12 groups of, in 1882. (Table 26.)	liij
of 348,338 Persons married, distinguishing Bachelors, Spinsters, Widowers, and Widows	26-28
at Death, of Males and Females registered in Divisions, Counties, and Districts	115-136
at Death, of Males and Females from different Causes	137-145
at Death, of Males and Females, in London, from different Causes	146-153
ALCOHOLISM ; increase of, probably only apparent	xviii
AREA in Acres and Hectares of the United Kingdom and its parts. (Table 49.)	lxxxix
in Acres of the Islands in the British Seas—Man, Jersey, Guernsey, &c. (Table 51.)	lxxxix
in Acres of each Division, County, and District	2-24
in Acres of each District and Sub-district	32-91
ARMY ; Strength and Mortality of, in 1882	xxi
Average Strength of, at Home in 1882. (Table 54.)	lxxxiv
Average Strength and Distribution of, in different parts of the United Kingdom and Abroad in each Year, 1863-82. (Table 55.)	lxxxiv
Average Strength, Deaths, and Death-rate in the United Kingdom. (Table 56.)	lxxxiv
Average Strength Abroad in each Year 1879-82. (Table 57.)	lxxxv
Deaths in, in Great Britain, Ireland, and Abroad in each Year, 1879-82. (Table 58.)	lxxxv

ARMY—continued.

Death-rate at Home and Abroad in each Year, 1859–82. (Table 59.)	lxxxv
Nationality of, in 1861–71–81. (Table 60.)	lxxxvi
Deaths in, in each Year, 1858–82, and the estimated Proportions belonging to England, Scotland, Ireland, and foreign parts. (Table 61.)	lxxxvi
AURORE BOREALES in 1882	xiv
AUSTRIA: Marriage, Birth, and Death-rates in each Year, 1861–82. (Table 73.)	ci
Estimated Population; Number, and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853–82. (Table 78.)	civ
ATMOSPHERIC PRESSURE in 1882	xxiv
BANKERS' CLEARING HOUSE; amount cleared per head of population, 1868–82. (Table A.)	vi
BELGIUM; Marriage, Birth, and Death-rates in each Year, 1861–82. (Table 73.)	ci
Estimated Population; Number and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853–82. (Table 84.)	cvi
BIRTHS in 1882	x
Sex proportions of	xi
Illegitimate, Proportion to total Births and to Population	xi
Illegitimate in Workhouses. (Table E.)	xi–xii
of British Subjects at Sea	xxii
registered, and excess over Deaths, in each Year, 1838–82. (Table 1.)	xxviii
in each Quarter of the Years 1838–82. (Table 12.)	xxxix
in each Year 1838–82; Legitimate and Illegitimate in 1842 and 1845–82, and Proportion of Males and Females. (Table 13.)	xl
proportion of Illegitimate Children to every 100 Births in Counties in each Year 1872–82, and the mean of 10 Years, 1872–81. (Table 14.)	xli
in Counties, in 1882. Numbers, Sex, Legitimate and Illegitimate; Proportions of Males to Females. (Table 15.)	xlii
proportion of Males and Females born in Counties in each Year, 1872–82, and the mean of 1872–81. (Table 16.)	xliii
in the United Kingdom and its parts. (Table 49.)	lxxxi
of British Subjects at Sea in each Year, 1856–82. (Table 62.)	lxxxvii
in Divisions and Counties, distinguishing sex, Legitimate and Illegitimate	30–31
in Divisions, Counties, Districts, and Sub-districts, distinguishing sex, Legitimate and Illegitimate	30–91
excess over Deaths, in Divisions, Counties, Districts, and Sub-districts	30–91
Illegitimate. (See ILLEGITIMATE BIRTHS.)	
BIRTH-RATE in 1882 the lowest since 1853	x
disparity in several Counties, and apparent causes	x
Illegitimate, slight decline of	xi
average annual Illegitimate, per 100C unmarried women, aged 15–45. 1880–81–82. (Table E.)	xii
in each Year, 1838–82, and the mean of 45 Years. (Table 2.)	xxix

	PAGES
BIRTH-RATE — <i>continued.</i>	
means of 45 years 1838-82, and of decennial and quinquennial periods 1838-80. (Table 3.)	xxx
in each Quarter of the Year 1838-82. (Table 12.)	xxxix
in each Year, 1838-82, and Legitimate and Illegitimate rates in 1842 and in 1845-82. (Table 13.)	xl
in Counties in each Year 1872-82, and the mean of 1872-81. (Table 17.)	xliv
in the United Kingdom and its several parts. (Table 50.)	lxxxi
BRAIN DISEASES , in Children of School Ages, 5-15 years. (Table G.)	xiv-xvi
(See CAUSES of DEATHS Tables.)	
BRONCHITIS. (See CAUSES of DEATHS Tables.)	
BUILDINGS registered for the Solemnization of Marriages.	x
BURNS AND SCALDS. (See CAUSES of DEATHS Tables.)	
CANCER , unprecedentedly fatal in 1882.	xix
(See also CAUSES of DEATHS Tables.)	
CAUSES of DEATH ; Registered	xvi
continued inadequate Certification of, and result of correspondence with Medical Practitioners in respect thereto	xvii
Mortality from the various Classes, 1882. (Table H.)	xvii
Ill-defined and Non-specified	xxi
Certification of, by Medical Practitioners and Coroners	xxi
further decline of uncertified Causes in 1882	xxi
in the Navy in 1882.	xxii
of 71 reputed Centenarians in 1882. (Table 28.)	lv
in the twenty-four years 1859-82. (Table 29.)	lvi-lvii
Mortality from, to 1,000,000 persons living in the twenty-four 1859-82. (Table 30.)	lviii-lix
Mean annual mortality from various causes to 1,000,000 living, in groups of ages, in quinquennials 1858-80, and in 1880-81-82. (Table 31.)	lx-lxi
Mortality from certain, in Counties, in 1882. (Table 34.)	lxvi-lxvii
of Males and Females in 1882; Deaths from each Cause to 1,000,000 living of each Sex. (Table 35.)	lxviii
proportional Number dying from each Cause. (Table 36.)	lxix
of 4,659 Sailors in 1882. (Table 64.)	lxxxix
in England, at different Periods of Life, Males and Females.	137-145
in London at different Periods of Life of Males and Females.	146-153
in each of the Registration Counties, Males and Females.	154-177
and Inquest Cases in Divisions, Counties, and Districts	178-210
Accidental, Suicidal, and Homicidal.	211-223
CENTENARIANS ; Deaths of reputed	xiv
Occupations, Ages at, and Causes of Death in 1882. (Table 28.)	lv
CERTIFIED PLACES OF WORSHIP ; Aggregate Number in 1882; the Number registered; and Certificates cancelled during the Year.	x
CERTIFICATION of the Causes of Death	xxi
CHANGES in the Constitution of Districts in 1882. (Table 72.)	

	PAGES
CHILDBIRTH ; inadequate certification of Deaths from, in 1882; addition of 428 deaths to the certified number as the result of correspondence with Medical Practitioners	xvii
Deaths at different Ages of Women after Childbearing, assigned to other Causes than Childbirth or Puerperal Fever. (Table 41.)	lxxiii
Deaths of Women returned as pregnant, with the assigned Cause. (Table 42.)	lxxiv
Deaths referred to, in each Year, 1847-82. (Table 43.)	lxxv
Deaths referred to, and Mortality of Mothers per 1,000 Children born alive, in Counties. (Table 44.)	lxxvi
CHILDREN under One Year of Age, Mortality among, in Counties in each Year, 1872-82. (Table 27.)	liv
Mortality of Infants under One Year of Age to 1000 births, in each Year 1838-82. (Table 32.)	lxxii-lxxiii
Ditto in London. (Table 33.)	lxxiv-lxxv
CIRCULATORY ORGANS. (See CAUSES of DEATHS Tables.)	
COALS ; Average price of, in each Year 1852-82, and in each Quarter of 1875-82. (Table 45.)	lxxvii
CONSOLS ; average price of, 1852-82, and in each Quarter of 1875-82. (Table 45.)	lxxvii
CONSTITUTIONAL DISEASES ; Deaths from, in 1882, and Mortality in 1881-82, and 1871-80. (Table H.)	xvii
remarks upon	xix
CONVULSIONS ; continual decline of deaths, from	xx
CROUP. (See CAUSES of DEATHS Tables.)	
DEATHS in 1882	xiii
as affected by the Ages of the Population	xiii
of Infants and of Centenarians	xiv
at School Ages	xiv
of each Sex	xvi
In Town and Country	xvi
Registered Causes of	xvi
from various classes of Causes in 1882. (Table H.)	xvii
from Zymotic or Specific Febrile Diseases	xvii
from Parasitic Diseases	xviii
from Dietic Diseases	xviii
from Constitutional Diseases	xix
from Delevelopmental Diseases	xix
from Local Diseases	xx
from Violence	xx
from Ill-defined and Non-specified Causes	xxi
Certification of Causes of	xxi
in the Army in 1882	xxi
in the Navy in 1882	xxii
of British Subjects at Sea	xxii
in the Mercantile Marine in 1882	xxii
registered in each Year 1838-82. (Table 1.)	xxviii
